

SURVEY of CURRENT BUSINESS

IN THIS ISSUE...

Real Gross Product of U.S. Companies' Majority-Owned Foreign Affiliates in Manufacturing

SURVEY of CURRENT BUSINESS

SURVEY OF CURRENT BUSINESS (ISSN 0039–6222). Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, SURVEY OF CURRENT BUSINESS, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Subscriptions to the Survey of Cur-RENT BUSINESS are maintained, and their prices set, by the Government Printing Office, an agency of the U.S. Congress. Postmaster: Send address changes to:

Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The GPO order desk number is (202) 512-1800. The subscription complaint desk number is (202) 512-1806.

Subscription and single-copy prices:

Periodicals: \$49.00 domestic,

\$61.25 foreign.

First-class mail: \$90.00.

Single copy: \$11.00 domestic,

\$13.75 foreign.

Make checks payable to the Superintendent of Documents.

Periodical postage paid at Washington, DC and at additional mailing offices. (USPS 337-790).

The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department.

Production Editor Ernestine T. Gladden

THIS ISSUE of the SURVEY went to the printer on April 9, 1997. It incorporates data from the following monthly BEA news releases:

U.S. International Trade in Goods and Services (March 20), Gross Domestic Product (March 28), and Personal Income and Outlays (March 31).

TABLE OF CONTENTS

Special in this issue

8 Real Gross Product of U.S. Companies' Majority-Owned Foreign Affiliates in Manufacturing

BEA has developed experimental estimates of real gross product of majority-owned foreign affiliates in manufacturing for 1982–94. These estimates are more useful than the current-dollar estimates for comparisons over time or across countries because they exclude changes in value that arise from movements in prices or exchange rates. As might be expected, removing the effects of changes in prices and exchange rates produces a gross product series that is generally both slower growing and less volatile than the current-dollar series. The new, experimental estimates are largely based on a newly developed procedure that uses "purchasing-power-parity" exchange rates to construct estimates for a base year and then constructs the estimates for other years by extrapolating the base-year estimates with chain-weighted Fisher quantity indexes similar to those used by BEA to estimate changes in U.S. gross domestic product.

Regular features

1 Business Situation

Real GDP increased 3.8 percent in the fourth quarter of 1996, up from a 2.1-percent increase in the third quarter. Real GNP increased 4.2 percent in the fourth quarter. Corporate profits decreased \$7.1 billion, in contrast to a \$5.4 billion increase in the third quarter; profits of domestic financial corporations decreased much more in the fourth quarter than in the third, and profits of domestic nonfinancial corporations decreased after increasing. In the fourth quarter, the Federal Government current deficit decreased \$1.9 billion, to \$105.9 billion, the smallest deficit since the third quarter of 1989; the State and local government surplus increased \$1.7 billion, to \$90.9 billion.

18 U.S. International Transactions, Fourth Quarter and Year 1996

In the fourth quarter of 1996, the U.S. current-account deficit decreased \$6.5 billion, to \$41.4 billion; the deficits on goods and services and on investment income decreased, while net unilateral transfers increased. In the capital account, net recorded inflows were \$68.0 billion in the fourth quarter, \$1.7 billion lower than in the third. For the year 1996, the current-account deficit increased \$16.9 billion, to \$165.1 billion; the deficits on goods and services and on investment income increased, and net unilateral transfers increased. In the capital account, net recorded inflows were \$218.2 billion in 1996, \$101.6 billion higher than in 1995.

LOOKING AHEAD

National Income and Product Accounts. In the May Survey, BEA will publish the following NIPA and wealth estimates that reflect the completion of the most recent comprehensive revision of the NIPA's: Revised NIPA summary estimates for 1929–96, revised estimates of reproducible tangible wealth for 1929–95, and newly available and revised NIPA estimates of selected series for 1991–96. For more information, see the box on page 5.

BUSINESS SITUATION

Larry R. Moran prepared the first section of this article, Daniel Larkins prepared the section on corporate profits, and Ann M. Groszkiewicz prepared the section on the government sector.

THE "FINAL" estimate of growth in real gross domestic product (GDP) for the fourth quarter of 1996 is 3.8 percent, 0.1 percentage point lower than the "preliminary" estimate reported in the March "Business Situation" (table 1 and chart 1); for 1981-96, the average revision from the preliminary to the final estimate, without regard to sign, was 0.3 percentage point.1

Table 1.—Revisions to Real Gross Domestic Product and Prices, Fourth Quarter 1996

[Seasonally adjusted at annual rates]

^{1.} Based on chained (1992) weights

NOTE.—The final estimates for the fourth quarter of 1996 incorporate the following revised or additional major source data that

NOTE.—The final estimates for the fourth quarter of 1996 incorporate the following revised of additional major source data that were not available when the preliminary estimates were prepared.

Personal consumption expenditures: Revised retail sales for December.

Nonresidential fixed investment: Revised construction put in place for November and December and revised manufacturers' shipments of machinery and equipment for December.

Residential fixed investment: Revised construction put in place for November and December.

Change in business inventories: Revised manufacturing and trade inventories for November and December Exports and imports of goods and services: Revised exports and imports of goods for December and revised balance of payments data on exports and imports of services for the fourth quarter.

Government consumption expenditures and gross investment: Revised State and local construction put in place for November

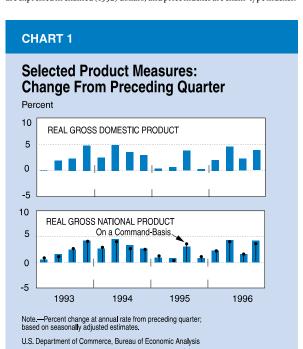

Wages and salaries: Revised employment, average hourly earnings, and average weekly hours for December.

GDP prices: Revised values and quantities of petroleum imports for December and revised prices of single-family homes under nstruction for the fourth quarter.

The general picture of the economy that is indicated by the final estimates is little changed from that shown in the preliminary estimates. GDP increased more in the fourth quarter than in the third, and the larger increase was more than accounted for by exports and consumer spending. Exports increased sharply in the fourth quarter after decreasing slightly in the third, and consumer spending increased much more in the fourth quarter than in the third. In addition, imports increased less in the fourth quarter than in the third, and residential investment decreased less in the fourth quarter than in the third. In contrast, inventory investment decreased in the fourth quarter after increasing in the third, nonresidential fixed investment increased less in the fourth quarter than in the third, and government spending decreased slightly more in the fourth quarter than in the third.

Revisions to the components of GDP were small. The largest revision was a \$3.1 billion downward revision to consumer spending for services,

changes are differences between these estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data. Real estimates are expressed in chained (1992) dollars, and price indexes are chain-type indexes.

^{1.} Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarter-to-quarter dollar

which primarily reflected newly available trade association data for November.

Real final sales of domestic product increased 4.9 percent in the fourth quarter, 0.1 percentage point less than the preliminary estimate. Real gross domestic purchases increased 1.6 percent, also 0.1 percentage point less than the preliminary estimate.

The price indexes for gross domestic purchases and for GDP increased 2.6 percent and 1.9 percent, respectively; each was 0.1 percentage point more than the preliminary estimate.

Real disposable personal income increased 2.6 percent, 0.1 percentage point more than the preliminary estimate. The personal saving rate was 5.1 percent, the same as the preliminary estimate.

Gross national product (GNP).—Real GNP increased 4.2 percent in the fourth quarter, 0.4 percentage point more than the increase in real GDP (chart 1 and table 2).² Receipts of factor income from the rest of the world increased more than payments of factor income; corporate profits accounted for most of the increase in receipts, and interest income accounted for most of the increase in payments.

Table 2.—Relation of Real Gross Domestic Product, Real Gross National Product, and Real Command-Basis Gross National Product

[Seasonally adjusted at annual rates]

Addendum: Terms of trade ¹	101.0	.1	9	.4	-3.5	

Ratio of the implicit price deflator for the sum of exports of goods and services and of receipts of factor income to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.

Real GNP on a command basis increased less than real GNP in the fourth quarter—3.7 percent, compared with 4.2 percent—reflecting a deterioration in the terms of trade.³ In the third quarter, command-basis GNP increased slightly more than real GNP—1.7 percent, compared with 1.6 percent—reflecting a small improvement in the terms of trade.

Corporate Profits

Profits from current production decreased \$7.1 billion in the fourth quarter after increasing \$5.4 billion in the third (table 3).⁴

Profits from domestic industries decreased \$20.4 billion after increasing \$7.3 billion. Profits of financial corporations decreased much more in the fourth quarter than in the third; the sharper fourth-quarter decrease was more than accounted for by a special assessment on thrift institutions to recapitalize the Savings Association Insurance Fund. (For additional information, see the discussion on Federal receipts in the "Government Sector.") Profits of nonfinancial corporations decreased after increasing, as a decrease in unit profits more than offset an increase in real output; the decrease in unit profits reflected a larger increase in unit labor costs than in unit prices. Profits from the rest of the world increased \$13.3 billion after decreasing \$1.8 billion; receipts picked up sharply, and payments slowed slightly.5

Cash flow from current production, a profitsrelated measure of internally generated funds available for investment, decreased \$1.1 billion after increasing \$12.4 billion. The ratio of cash flow to nonresidential fixed investment, an indicator of

^{2.} GNP—goods and services produced by labor and property supplied by U.S. residents—equals GDP plus receipts of factor income from the rest of the world less payments of factor income to the rest of the world.

NOTE.—Levels of these series are found in NIPA tables 1.10 and 1.11.

^{3.} In the estimation of command-basis GNP—a measure of the goods and services produced by the U.S. economy in terms of their purchasing power—the current-dollar value of the sum of exports of goods and services and of receipts of factor income is deflated by the implicit price deflator for the sum of imports of goods and services and of payments of factor income.

The terms of trade is a measure of the relationship between the prices that are received by U.S. producers for exports of goods and services and the prices that are paid by U.S. purchasers for imports of goods and services. It is measured by the following ratio, with the decimal point shifted two places to the right: In the numerator, the implicit price deflator for the sum of exports of goods and services and of receipts of factor income; in the denominator, the implicit price deflator for the sum of imports of goods and services and of payments of factor income. Changes in the terms of trade reflect the interaction of a number of factors—including movements in exchange rates, changes in the composition of the traded goods and services, adjustment lags, and changes in producers' profit margins. For example, if the U.S. dollar were to appreciate against a foreign currency, a foreign manufacturer may choose to absorb this cost by reducing the profit margin on the product it sells to the United States rather than by raising prices and risking a loss in market share.

^{4.} Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown in national income and product account tables 1.14, 1.16, and 6.16c as "corporate profits with inventory valuation and capital consumption adjustments."

^{5.} Profits from the rest of the world are receipts of profits from foreign affiliates of U.S. companies less payments of profits by U.S. affiliates of foreign companies.

the share of the current level of investment that could be financed by internally generated funds, decreased to 80.9 percent from 81.7 percent. These levels are near the low end of the range in which the ratio has fluctuated during most of this decade.

Industry profits.—Industry profits decreased \$9.7 billion after increasing \$4.1 billion.⁶ For domestic financial corporations, a much sharper decrease in the fourth quarter than in the third was more than accounted for by the special assessment on thrift institutions. Profits of domestic nonfinancial corporations declined in the fourth quarter after increasing in the third. The downturn was accounted for by retail trade, by transportation and public utilities, and by manufacturing; in contrast, profits in wholesale trade picked up, and profits in "other" nonfinancial industries increased about as much in the fourth quarter as in the third.

IVA Inventory valuation adjustment CCAdj Capital consumption adjustment

Related measures.—Profits before tax (PBT) increased \$1.5 billion in the fourth quarter after decreasing \$9.0 billion in the third. The difference between the \$10.5 billion upturn in PBT and the \$12.5 billion downturn in profits from current production was more than accounted for by inventory profits, which increased in the fourth quarter after decreasing in the third. (Inventory profits are represented in the national income and product accounts by the inventory valuation adjustment, with the sign reversed.)

Government Sector

The combined current deficit of the Federal Government and State and local governments decreased \$16.6 billion, to \$15.0 billion, in the fourth quarter (table 4). The decrease was primarily accounted for by a decrease in the Federal deficit; the State and local government surplus increased slightly.

Federal

The Federal Government current deficit decreased \$14.9 billion, to \$105.9 billion, in the fourth quarter after decreasing \$5.9 billion in the third. The fourth-quarter deficit is the smallest since the third quarter of 1989.

Receipts.—Receipts increased \$37.4 billion in the fourth quarter after increasing \$6.3 billion in the third. Both the fourth-quarter increase and the acceleration were accounted for by indirect business tax and nontax accruals and by personal tax and nontax receipts.

Indirect business tax and nontax accruals increased \$23.0 billion after increasing \$2.5 billion. Indirect business nontaxes increased \$18.2 billion after increasing \$0.1 billion. The step-up was accounted for by a special assessment of \$18.0 billion (annual rate) that was paid to the Saving Association Insurance Fund by thrift institutions; this assessment recapitalized the fund, bringing the deposit fund to the target reserve ratio of \$1.25 per \$100 in deposits.7 Air transport excise taxes increased \$4.5 billion after increasing \$0.9 billion; these excise taxes, which had expired at the end of December 1995 as a result of the Federal budget impasse, were reinstated in late August.

Personal tax and nontax receipts increased \$10.9 billion after decreasing \$1.2 billion. Estimated income tax payments and final settlements, less refunds, increased \$1.5 billion after decreasing

^{6.} Industry profits, which are estimated as the sum of corporate profits before tax and the inventory valuation adjustment, are shown in national income and product accounts table 6.16c. Estimates of the capital consumption adjustment do not exist at a detailed industry level; they are available only for total financial and total nonfinancial industries.

NOTE.-Levels of these and other profits series are found in NIPA tables 1.14, 1.16, 6.16C,

^{7.} The Federal Deposit Insurance Corporation authorized the assessment on October 8, 1996.

\$11.5 billion; the third-quarter decrease followed a second-quarter boost in tax receipts that reflected the third and final installment payment allowed by the provisions of the Omnibus Budget Reconciliation Act of 1993 that retroactively increased tax rates for high-income taxpayers. Withheld income taxes increased \$10.4 billion after increasing \$9.8 billion, reflecting an acceleration in wages and salaries.

Corporate profits tax accruals decreased \$3.7 billion after decreasing \$2.5 billion, reflecting the pattern of domestic corporate profits.

Current expenditures.—Current expenditures increased \$22.6 billion in the fourth quarter after increasing \$0.3 billion in the third. The acceleration was mostly accounted for by transfer payments (net) and grants-in-aid to State and local governments.

Transfer payments (net) increased \$16.9 billion after increasing \$5.0 billion. Transfer payments to the rest of the world increased \$11.6 billion after decreasing \$0.1 billion; the upturn was more than accounted for by \$12.0 billion (annual rate) in economic support and other payments to Israel. Transfer payments to persons increased \$5.4 billion after increasing \$5.2 billion.

Grants-in-aid to State and local governments increased \$2.3 billion after decreasing \$4.8 billion. The upturn was mostly accounted for by grants for medicaid, which increased \$0.8 billion after decreasing \$4.5 billion. Grants for highways, human development services, community development services, and other programs also turned up. Subsidies less current surplus of government enterprises increased \$1.7 billion after decreasing \$0.5 billion. The turnaround was mainly accounted for by a downturn in the surplus of the Postal Service.

Net interest paid increased \$5.1 billion after increasing \$2.9 billion. The acceleration was accounted for by a downturn in interest received on foreign currency holdings.

Consumption expenditures decreased \$3.6 billion after decreasing \$2.2 billion. Nondefense consumption expenditures decreased \$3.6 billion after increasing \$0.5 billion. The downturn was accounted for by services, which decreased \$3.1 billion after increasing \$0.6 billion. Within services, sales of services increased \$3.3 billion after decreasing \$0.3 billion. (Sales by government, except those by government enterprises, of goods and services similar to those provided by the private sector are treated as deductions from current expenditures.)

State and local

The State and local government current surplus increased \$1.7 billion, to \$90.9 billion, in the fourth quarter after decreasing \$11.8 billion in the third. The turnaround was largely attributable to receipts.

Receipts increased \$12.2 billion after increasing \$1.9 billion. The acceleration was mostly accounted for by an upturn in Federal grants-in-aid, which increased \$2.3 billion after decreasing \$4.8 billion. Indirect business tax and nontax accruals increased \$6.3 billion after increasing \$3.4 billion; the acceleration was mostly accounted for by sales

taxes. Personal tax and nontax receipts increased \$3.9 billion after increasing \$3.1 billion.

Current expenditures increased \$10.5 billion after increasing \$13.7 billion. The deceleration was accounted for by consumption expenditures, which increased \$6.0 billion after increasing \$9.1 billion. Within consumption expenditures, a slow-down in compensation of employees reflected a deceleration in employment.

Government Sector in 1996

The combined current deficit of the Federal Government and State and local governments decreased \$32.6 billion in 1996 after decreasing \$23.8 billion in 1995. The combined deficit has declined every year, beginning in 1993, and the 1996 deficit was the smallest since 1982. The 1996 decrease was more than accounted for by a decrease in the Federal current deficit; the current surplus of the State and local governments registered a small decrease.

The Federal current deficit decreased \$34.6 billion, to \$127.1 billion, the smallest Federal deficit since 1989; the decrease was attributable to a larger

increase in receipts than in current expenditures.⁸ Federal receipts increased \$96.6 billion; the increase was mostly attributable to personal tax and nontax receipts, contributions for social insurance, and corporate profits tax accruals. Federal current expenditures increased \$62.0 billion; the increase was mostly accounted for by transfer payments to persons and by grants-in-aid to State and local governments.

The State and local government current surplus decreased \$2.0 billion, to \$93.0 billion; the decrease was attributable to a larger increase in current expenditures than in receipts. Current expenditures increased \$49.9 billion; the increase was mostly accounted for by consumption expenditures and by transfer payments to persons. Receipts increased \$47.9 billion; the increase was mostly attributable to indirect business tax and nontax accruals, personal tax and nontax receipts, and Federal grants-in-aid.

Release of Revised NIPA and Wealth Estimates

In May, the release of the following estimates will mark the completion of the most recent comprehensive revision of the national income and product accounts (NIPA's).

Revised NIPA estimates for 1929–58: The May Survey will present summary tables of revised NIPA estimates beginning in 1929 that will reflect the following major changes that were incorporated last year into the NIPA estimates beginning with 1959: Adoption of BEA's improved measures of real output and prices, the definitional change that recognizes government investment, and the improved methodology for calculating depreciation. More detailed estimates will be available electronically through STAT-USA'S Economic Bulletin Board or Internet services and on diskette from BEA.

Revised estimates of reproducible tangible wealth for 1929–95: The May Survey will contain an article that presents revised estimates of reproducible tangible wealth for 1929–95 and that describes the methodology used to prepare these estimates, including the improved methodology for calculating depreciation. The complete set of wealth estimates will be available electronically through STAT-USA'S Economic Bulletin Board or Internet services and

on diskette from BEA. In addition, these estimates, along with the definitions, classifications, and methodologies that underlie them, will be published later this year in *Fixed Reproducible Tangible Wealth of the United States*, 1925–96.

Newly available and revised NIPA estimates of selected series for 1959–96: The May Survey will present a set of tables showing newly available series that reflect the work undertaken to complete the estimates of reproducible tangible wealth—namely the estimates of real consumption of fixed capital and related net product and net investment series and revised series that primarily reflect the incorporation into the NIPA's of the revisions to the wealth estimates. The largest revisions will be to capital consumption adjustment and consumption of fixed capital and to the series that depend upon them—including corporate profits from current production and some components of personal income; revisions to other series are expected to be small. The tables in the May Survey will present the estimates for 1991-96; all the newly available and revised estimates for 1959-96, including the more detailed estimates, will be available electronically through stat-usa's Economic Bulletin Board or Internet services and on diskette from BEA.

^{8.} The budget estimates in the national income and product accounts differ from the official U.S. Budget estimates in several respects, including the timing of transactions, the treatment of investment, and other coverage differences. For more information, see "Federal Budget Estimates, Fiscal Year 1998," Survey of Current Business 77 (March 1997): 8–16.

Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade

Tables 1, 2, and 3 show quarterly and monthly estimates of real inventories, sales, and inventory-sales ratios, respectively. Real manufacturing inventories by stage of fabrication are shown in table 4. Real estimates are in chained (1992) dollars.

Data availability

Quarterly estimates for 1977-95 of real manufacturing and trade inventories, sales, and inventory-sales ratios and of real manufacturing inventories by stage of fabrication were published in the May 1996 SURVEY OF CURRENT BUSINESS.

Estimates for 1967 forward are available electronically to subscribers to STAT-USA'S Economic Bulletin Board

Includes lumber and wood products: furniture and fixtures: stone, clay, and glass products: instruments and related products; and miscellaneous manufacturing industries.

2. Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather

and leather products.

3. Prior to 1981, inventories and sales of auto and home supply stores are included in motor vehicle dealers. Beginning with 1981, these inventories are included in "other durable goods"

NOTES—Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory. Trade inventories are classified by the type of product sold by the establishment holding the inventory. Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories.

Includes Jumber and wood products; furniture and fixtures; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing industries.

2. Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather

and leather products.

3. Prior to 1981, inventories and sales of auto and home supply stores are included in motor vehicle dealers. Beginning with 1981, these inventories are included in "other durable goods".

NOTES.—Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory. Trade inventories are classified by the type of product sold by the establishment holding the inventory. Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories.

Real Gross Product of U.S. Companies' Majority-Owned Foreign Affiliates in Manufacturing

By Raymond J. Mataloni, Jr.

 $m{q}$ N AN initial attempt to remove valuation effects from its measures of the foreign manufacturing activities of U.S. multinational companies (MNC's), the Bureau of Economic Analysis (BEA) has developed experimental estimates of the real gross product of majority-owned foreign affiliates (MOFA's) in manufacturing for 1982–94. Gross product—a measure of value added—is used as a summary measure of economic activity because it is free of double counting, unlike sales or receipts data, which reflect not only value added within the firm, but also the value of intermediate inputs purchased from outside the firm. BEA has long provided current-dollar estimates of gross product for моға's and for their U.S. parent companies, but the usefulness of these estimates for comparisons over time or across countries has been limited by the fact that they do not allow changes in real value added to be distinguished from changes in value arising from movements in prices or exchange rates.²

This article benefited significantly from comments by two reviewers from outside BEA—Peter Hooper and Robert E. Lipsey.

As might be expected, removing the effects of changes in prices and exchange rates produces a gross product series that is generally both slower growing and less volatile than the current-dollar series. In real terms, the gross product of MOFA's in manufacturing grew at an average annual rate of 2.5 percent from 1982 to 1994, a rate similar to the rate of growth in host-country industrial production.³ Year to year, the changes ranged from -4.4 percent in 1991 to 8.4 percent in 1994 (table 1 and chart 1). In terms of current dollars, the product of MOFA's grew at a 5.9-percent rate, and the year-to-year changes ranged from -4.8 percent in 1983 to 18.8 percent in 1987.

Two procedures were used to prepare the estimates of real gross product—a preferred procedure for 19 major host countries that account for over three-quarters of the total gross product of MOFA's in manufacturing and a cruder procedure for other host countries. The preferred procedure consisted of two steps: Estimates for a base year (1993) were

^{1.} A foreign affiliate is a foreign business enterprise in which there is U.S. direct investment; that is, a U.S. person ("U.S. parent") owns or controls, directly or indirectly, 10 percent or more of the voting securities or the equivalent. (In this definition, "person" is broadly defined to include any individual, branch, partnership, associated group, association, estate, trust, corporation or other organization—whether or not organized under the laws of any State—or any government entity.) A Mofa is a foreign affiliate in which the combined ownership of all U.S. parents exceeds 50 percent.

A U.S. parent comprises the domestic (U.S.) operations of a U.S. MNC. Foreign affiliates comprise the foreign operations of a U.S. MNC over which the parent is presumed to have a degree of managerial influence. MOFA's comprise the foreign operations over which the parent(s) has a controlling interest.

^{2.} For the most recent current-dollar estimates of gross product, see "Operations of U.S. Multinational Companies: Preliminary Results From the 1994 Benchmark Survey," Survey of Current Business 76 (December 1996): 11–37. For information on methodology and for illustrations of the uses of these estimates, see "Gross Product of U.S. Multinational Companies, 1977–91," Survey 74 (February 1994): 42–63.

Employment has sometimes been used as an indicator of MNC economic activity because it is not directly affected by prices or exchange rates, but it is an imperfect measure because it measures the usage of a factor of production rather than production itself and because it does not reflect changes in the hours worked per employee or the usage of nonlabor factors of production.

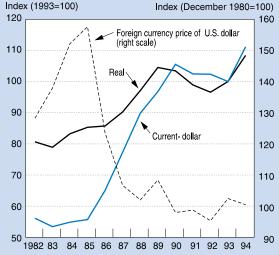

Industrial production indexes are used for this comparison because estimates of real gross product originating in manufacturing are not available for all countries or for all years.

first constructed using "purchasing power parity" (PPP) exchange rates rather than the market exchange rates (MER's) that are the basis of the current-dollar estimates; then estimates for other years were constructed by extrapolating the base-year estimates with chain-weighted Fisher quantity indexes similar to those used by BEA to estimate changes in U.S. gross domestic product.

Unlike MER's, the PPP exchange rates used to establish the base-year levels under the preferred procedure approximate the number of foreign currency units required to purchase goods and services—whether or not traded internationally—equivalent to those that can be purchased in the United States with 1 U.S. dollar.⁴ MER's, on the other hand, reflect a variety of factors, such as international capital movements and expectations of financial market conditions, that are not directly related to the prices of goods and services. As an example of how MER's may move counter to purchasing power parity, from 1980 to 1985, the U.S.

CHART 1

Indexes of Current-Dollar and Real Gross Product of Majority-Owned Foreign Affiliates in Manufacturing and the Foreign-Currency Price of the U.S. Dollar, 1982-94

NOTE—The index of the foreign currency price of the U.S. dollar is a trade-weighted average against the currencies of the following 10 countries: Belgium, Canada, France,Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, and the United Kingdom.

U.S. Department of Commerce, Bureau of Economic Analysis

dollar price of German marks fell by nearly 40 percent even though the average rate of inflation, measured in consumer prices, was more than 2 percentage points *higher* in the United States than in Germany.⁵ MER-based translation of a given volume of production by MOFA's under these conditions would have shown a dramatic decrease, even though in fact none had occurred.

For other host countries, the data needed for the preferred procedure were unavailable, and real dollar-denominated estimates were derived simply by deflating the current-dollar estimates (which had been translated at MER's) by the implicit price deflator for U.S. gross domestic product originating in nonpetroleum manufacturing industries. The estimates constructed using this procedure, though crude, appear to provide reasonable approximations of the true values of real gross product for the group even if not for each country. (See the section "Methodology" for further discussion of both procedures.)

The remainder of the article comprises two parts and an appendix. The first part examines trends in the real gross product estimates and their relationship to the current-dollar estimates. The second part provides a detailed description of the methodology used to prepare the estimates. The appendix provides a brief introduction to PPP exchange rates.

Trends in 1982-94

This section examines trends in the real gross product estimates for MOFA's in manufacturing. The trends in the estimates of real gross product are then compared with those in the current-dollar estimates of gross product.

All countries

The real gross product of MoFA's in manufacturing grew at an average annual rate of 2.5 percent in 1982–94—below the 3.1-percent growth rate in real gross product originating in manufacturing industries in the United States but above the about 2-percent growth rate in the real gross product of U.S. parents in manufacturing.⁶

^{4.} PPP exchange rates are not directly observable in the marketplace, but are estimated by international organizations—such as the Organisation for Economic Co-Operation and Development, the United Nations, and the World Bank—by comparing prices for specific goods and services across countries. For additional information on PPP exchange rates see the appendix.

Although more appropriate for this exercise than MER's, the PPP exchange rates used pertain to prices to the consumer rather than to the producer, which can cause some measurement error.

^{5.} As an example of the failure of Mer's to track absolute price levels of a particular good or service, the U.S.-dollar prices of a popular fast-food sandwich in various countries have been compared under the prevailing Mer's: In 1994, the sandwich cost \$2.30 in the United States, \$3.77 in Japan, and \$1.66 in Hungary. See Michael R. Pakko and Patricia S. Pollard, "For Here or To Go? Purchasing Power Parity and the Big Mac," *Review* (Federal Reserve Bank of St. Louis, January/February1996): 3–17.

^{6.} For Mofa's, the industry group "manufacturing" excludes petroleum and coal product manufacturing. Mofa's (and U.S. parents) are classified by an enterprise-based system in which all petroleum-related activities (such as oil extraction, refining, and gasoline retailing) are classified in a separate "petroleum" category. For this reason, the estimate of real gross product originating in all U.S. manufacturing industries used in this comparison excludes petroleum

The patterns of growth in the real gross product of MOFA's in manufacturing differed throughout 1982–94, but these patterns can be roughly divided into three parts: An average annual growth of 3.8 percent from 1982 to 1989, an average annual decline of 2.6 percent from 1989 to 1992, and an average annual growth of 5.9 percent from 1992 to 1994.

Changes in MOFA gross product are the net result of several factors—changes in the capacity utilization of existing MOFA facilities, changes in

productive capacity that result from expansion or contraction of existing affiliates, establishment of new affiliates (or "greenfield investments"), acquisitions of existing foreign firms, and sell-Because the direction of the changes in MOFA gross product corresponds with the direction of the changes in economic conditions in several major host-country locations (including Europe, Canada, and Australia), growth in моға gross product during 1982–94 probably was mostly accounted for by growth in existing operations, which would be expected to mirror host-country economic conditions. However, greenfield investments and acquisitions also appear to have contributed significantly to the growth in the gross product of MOFA's in some countries.

and coal products manufacturing. For details on the industrial classification of MoFa's, see "A Guide to BEA Statistics on U.S. Multinational Companies," SURVEY 75 (March 1995): 38–55.

Rough estimates of real gross product for U.S. parents in manufacturing were derived by deflating the current-dollar estimates at the broad industry level shown in table 4 by the implicit price deflators for U.S. gross domestic product originating in those industries.

NOTE.—Chained (1993) dollar series were derived by extrapolating the base-year (1993) PPP-exchange-rate-based current-dollar value of the corresponding series by a Fisher quantity index (see the text for details). Because the formula for the Fisher quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the total line and the sum of the most detailed lines.

Although the real estimates are denominated in dollars of 1993, the estimate for 1993 does not equal the current-

dollar estimate for that year, because the two estimates are based on different exchange rates. As explained in the text, the current-dollar estimates are based on market exchange rates and the real estimates are based on purchasing-power-parity exchange rates.

OECD Organisation for Economic Co-Operation and Development

19 OECD countries

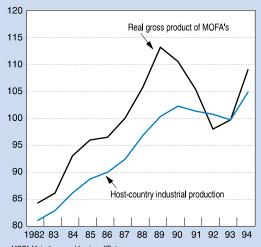

From 1982 to 1994, real gross product of MOFA's in manufacturing in 19 member countries of the Organisation for Economic Co-Operation and Development (OECD) grew at an average annual rate of 2.2 percent—the same as the (weighted) average annual rate of growth in total industrial production in these countries (table 2 and chart 2).⁷ Even on a year-to-year basis, the movements in the gross product estimates generally tracked the industrial production in the host countries.

From 1982 to 1989, the estimates of real gross product for MOFA's in the 19 countries grew at an average annual rate of 4.3 percent, compared with a 3.1-percent growth rate for host-country

CHART 2

Index (1993=100)

Indexes of Real Gross Product of **Majority-Owned Foreign Affiliates in** Manufacturing and Host-Country Industrial Production, in 19 OECD Countries, 1982-94

MOFA Majority-owned foreign affiliate OECD Organisation for Economic Co-Operation and Development

NOTES—The 19 OECD countries covered in this chart are Australa, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Spain, Sweden, and the United Kingdom.

The composite index of industrial production was derived by weighting each country's index by the country's share in the cumulative dollar value of real gross product of MOFA's in manufacturing in 1982-94.

U.S. Department of Commerce, Bureau of Economic Analysis

industrial production. The growth in gross product was widespread, reflecting an extended period of economic growth in most of the OECD countries. Greenfield investments and acquisitions may have also contributed to the growth in several host countries—such as Ireland, Japan, the Netherlands, and Spain—where MOFA gross product grew much faster than the worldwide average.

From 1989 to 1992, the estimates of real gross product for MOFA's decreased at an average annual rate of 4.6 percent, compared with a growth rate of 0.1 percent for host-country industrial production. The decrease reflected falling capacity utilization for MOFA's (related to slow growth or recession in host-country economies) that more than offset the modest growth in the productive capacity of MOFA's during this period. Among the larger host countries, Australia, Canada, and the United Kingdom had the largest decreases, perhaps because economic recessions began earlier in those countries than in most other OECD countries.

From 1992 to 1994, the estimates of real gross product for MOFA's increased at an average annual rate of 5.5 percent, compared with a 2.0-percent growth rate for host-country industrial production. The increases in gross product were widespread and mainly reflected renewed economic growth in the host countries.

All other countries

From 1982 to 1994, real gross product of MOFA's in manufacturing in "all other countries" grew at an average annual rate of 3.6 percent. Unlike the growth in the 19 OECD countries, the growth in these countries was slowest from 1982 to 1989, partly reflecting the effects of a debt crisis in Latin America. From 1989 to 1994, growth accelerated, reflecting renewed economic growth in Latin America and new investments by U.S. MNC's in emerging markets worldwide.

Comparison of real and current-dollar estimates

All countries.—The real and current-dollar estimates of gross product present very different pictures of the level and growth of U.S. companies' overseas manufacturing activities in 1982–94. The differences can be explained largely by exchange-rate conditions rather than by changes in prices.

Unlike most real and current-dollar series, the levels of the estimates of real and current-dollar gross product do not match in the base year, 1993, of the real series; the current-dollar estimate is \$177.7 billion, whereas the real estimate is

^{7.} For this comparison, a composite index of industrial production was derived by weighting each country's index by that country's share of the cumulative dollar value of real gross product of MOFA's in manufacturing in 1982-94.

The concepts, coverage, and method of computation of industrial production indexes are similar to those of estimates of real gross product of MOFA's in manufacturing. However, the industrial production indexes include the mining, petroleum refining, and electric and gas utilities industries, and some countries' industrial production indexes are based on the changes in the total output (sales plus inventory change) in specific industries rather than on the gross product originating in them. In addition, the industry-level changes are often aggregated with fixed benchmark-year weights rather than with chained weights like those used for the real gross product estimates.

\$153.2 billion (table 2). The difference results from differences in the exchange rates on which the estimates are based: The current-dollar estimates are based on MER's, and the real estimates are based on PPP exchange rates. The lower level of the real series in 1993 reflects the higher exchange value of the dollar under PPP exchange rates in 1993 than under MER's. Under the prevailing MER, one unit of currency could have purchased more, on average, in the United States than it could have abroad.

During 1982–94, the year-to-year changes in the real estimates differed from those in the currentdollar estimates. Real gross product of MOFA's in manufacturing grew at an average annual rate of 2.5 percent, compared with an average annual growth rate of 5.9 percent for the current-dollar estimates. Most of the divergence occurred in 1985-90 (chart 1). From 1982 to 1985, the two series moved roughly in tandem, probably because changes in the MER value of the dollar were consistent with those needed to maintain purchasing power parity between the dollar and the currencies of the countries where U.S. MNC's were producing; the dollar appreciated at a time when U.S. inflation was generally milder than that of the major host countries (table 3). From 1985 to 1990, the real estimates grew at an average annual rate of 3.9 percent, compared with a 14.0-percent rate for the current-dollar estimates. The difference in the growth rates probably reflects the depreciation of the MER value of the dollar; the dollar depreciated substantially even though U.S. inflation continued to be generally milder than that abroad. From 1990 to 1994, the differences between the two series were smaller, probably reflecting relative stability in the MER value of the dollar.

19 OECD countries.—For most of the 19 OECD countries, the relationship between the current-dollar and the real estimates of gross product was similar to that for all countries. In 1993, the levels of the current-dollar estimates exceeded those of the real estimates in all but two countries (Greece and New Zealand). Like the estimates for all countries, the current-dollar estimates for the 19 countries grew more than twice as fast, on average, as the esti-

mates of real gross product. The differences in the growth rates for the largest OECD host countries were generally most pronounced between 1985 and 1988 (chart 3).

All other countries.—In contrast to the levels for the 19 OECD countries, the levels of the estimates of current-dollar and real gross product for all other countries are identical in 1993, and in the other years, the differences between the two series simply reflect inflation as measured by the U.S. implicit price deflator for gross domestic product originating in nonpetroleum manufacturing industries. This relationship results from the method used to produce the real gross product estimates for these countries.

Methodology

This section describes the methodology for preparing the estimates of real gross product, which were derived by adjusting the current-dollar estimates.

Current-dollar gross product estimates

Gross product for a firm, such as a MOFA, can be measured as its gross output (sales or receipts and other operating income, plus inventory change) less its purchased intermediate inputs (purchased goods and services). Alternatively, gross product can be measured as the sum of the costs incurred (other than for intermediate inputs) and the profits earned in production. The current-dollar gross product estimates for MOFA's are prepared by summing costs and profits. The data on costs and profits are collected in BEA's annual and benchmark surveys of U.S. direct investment abroad and are combined with BEA estimates of some items. Survey respondents are asked to follow U.S. generally-accepted accounting principles (GAAP), which require that revenues and costs denominated in foreign currencies be translated to U.S. dollars, using the average MER for the year. 9 Therefore, the gross product estimates that are derived from these data reflect what a U.S. buyer would pay, at the prevailing MER, to purchase the gross product of MOFA's from abroad.

Real gross product estimates

Two procedures were used to prepare the estimates of real gross product. A preferred procedure was

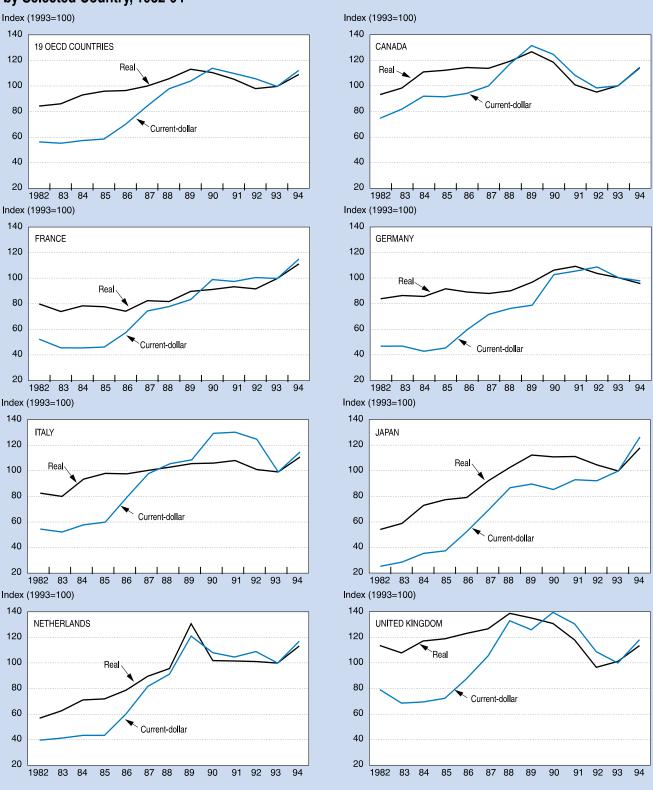

^{8.} See "Gross Product of U.S. Multinational Companies, 1977–91."

However, in accordance with GAAP, the revenues and expenses of affiliates operating in hyperinflationary economies are translated daily into U.S. dollars at the prevailing daily MER's; thus, the accounts for these affiliates are, in effect, kept in dollars.

CHART 3

U.S. Department of Commerce, Bureau of Economic Analysis.

Indexes of Current-Dollar and Real Gross Product of Majority-Owned Foreign Affiliates in Manufacturing, by Selected Country, 1982-94

used for the estimates for 19 major host countries that account for over three-quarters of the total gross product of MOFA's in manufacturing. A cruder procedure was used for the estimates for other host countries, because the data needed for the preferred procedure were unavailable.

19 OECD countries.—The estimates of real gross product for the 19 OECD countries were prepared in two steps (chart 4). First, estimates for a base year, 1993, were prepared using PPP exchange rates in place of MER's.

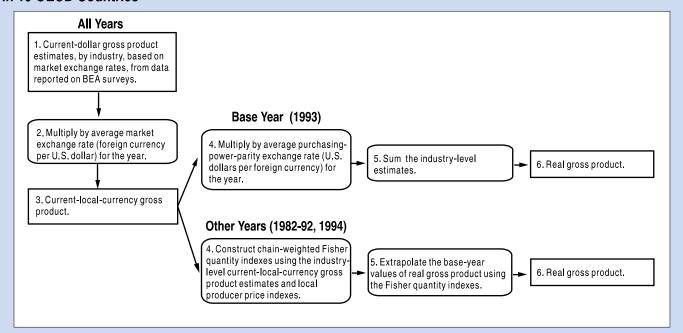

Product-specific, rather than economywide, PPP exchange rates were used because they are considered more appropriate for translating gross product for a particular group of industries, such as manufacturing industries. For the 19 OECD countries, PPP exchange rates for specific final consumption and investment expenditure categories were available from the OECD and were used in deriving the base-year estimates of real gross product for MOFA's in these countries. 11

The estimates for the base year were derived as follows (chart 4, "Base Year"). First, the current-dollar estimates for each of the 19 OECD countries and for 7 major manufacturing industries (table 4, column 1) in each country were translated back into current local currency by using the average MER for the year. Second, the estimates for each industry were retranslated into U.S. dollars by using the most appropriate PPP exchange rate (table 4, column 3). Third, the industry-level estimates for each country were summed to produce the base-year estimates by country. Fourth, the estimates for each country were summed to produce the base-year estimate for all 19 countries.

The second step in producing the real gross product estimates was to extrapolate the base-year estimates to other years (1982–92 and 1994) by using chain-weighted Fisher quantity indexes (chart 4, "Other Years"). The current-dollar estimates at the country and industry level were first translated back into current local currency.

CHART 4

Derivation of Real Gross Product of Majority-Owned Foreign Affiliates in Manufacturing in 19 OECD Countries

OECD Organisation for Economic Co-Operation and Development

^{10.} See, for example, Peter Hooper, "Comparing Manufacturing Output Levels Among the Major Industrial Countries," in *Industry Productivity: International Comparison and Measurement Issues* (Paris: OECD, 1996).

^{11.} The exchange rates used in this study were published in OECD, Purchasing Power Parities and Real Expenditures 1993, EKS Results, Volume 1 (Paris: OECD, 1995).

It would have been preferable to use PPP exchange rates that were based on producers' prices rather than on consumers' prices, or that had otherwise been adjusted for differences between expenditure and output prices, but none were readily available. Some analysts, such as Hooper (1996), have attempted to make rough adjustments for some of these factors (such as cross-country differences in distribution margins and indirect taxes).

The resulting estimates by industry were then used, along with country- and industry-specific producer price indexes (table 4, column 2), to construct a chain-weighted Fisher quantity index for each country.¹²

The following Fisher quantity index (Q) was used to estimate the change in the real gross product for MOFA's in a country between any two adjacent years:13

$$Q = \sqrt{\frac{\sum p_{i1}q_{i2}}{\sum p_{i1}q_{i1}}} \times \frac{\sum p_{i2}q_{i2}}{\sum p_{i2}q_{i1}},$$

where the p's are prices in local currency, the q's are quantities, the i's are industries, and 1 and 2 are adjacent years.

Because the variables that represent the composites of prices in one period and the quantities in another (such as p_{i1} q_{i2}) are not directly observable, the quantity indexes were actually computed using an algebraically equivalent formula consisting of combinations of prices and quantities of the same period (the current-local-currency estimates) and indexes of relative prices in the two periods (the ratios of producer price indexes).¹⁴

The Fisher quantity indexes were used as the bases for extrapolating the dollar-denominated PPP-based estimates for the base year (1993) to the other years covered (1982–92 and 1994). 15

$$Q = \sqrt{\frac{\sum \frac{p_{i1}}{p_{i2}} \cdot p_{i2} q_{i2}}{\sum p_{i1} q_{i1}}} \times \frac{\sum p_{i2} q_{i2}}{\sum \frac{p_{i2}}{p_{i1}} \cdot p_{i1} q_{i1}}$$

15. Ideally, the gross product estimates would have been derived using a double-deflation method (applying separate price deflators to output in current local currency and to purchased inputs in current local currency), but source data were not available to use this method. For this reason and because the gross product of MOFA's is calculated from the "income" components (rather than by subtracting purchased inputs from gross output), the quantity index of real output had to be derived by applying a price deflator directly to the current-price gross product estimates.

The estimate for all 19 countries for each year was derived by extrapolating the base-year estimate using a Fisher quantity index that aggregated across countries as well as across industries.¹⁶

All other countries.—Real gross product estimates for all other countries were derived using a cruder method because of the limited availability of data. The estimates were prepared on the basis of the assumption that MER's tend to maintain purchasing power parity between these countries' currencies and the U.S. dollar. Therefore, the real gross product estimates were derived by simply deflating the current-dollar gross product estimates with the U.S. implicit price deflator for gross domestic product originating in manufacturing.

The assumption that MER's maintain purchasing power parity between currencies is clearly naive, but certain factors precluded the use of the method followed for the 19 OECD countries. First, some of the most important host countries in this group experienced hyperinflation during much of the period being examined, and the use of the available average annual MER's could not be relied upon to produce estimates that approximated the actual local-currency-denominated values.¹⁷ Second, although economywide PPP exchange rates were available for many (if not all) of these countries, PPP exchange rates can be very imprecise and difficult to interpret for pairs of countries—such as the United States and many lower income non-OECD countries—for which the patterns of consumption and production differ so sharply as to almost preclude the construction of a common representative market basket of goods and services.¹⁸ Because of

Table 4.—Categories Within the Manufacturing Industry Used for Price Deflation and Currency Translation

Gross product	Producer price index for foreign countries ¹	Purchasing-power-parity exchange rate ²

^{1.} See chart 4, "Other Years," item 4. 2. See chart 4, "Base Year," item 4.

^{12.} The industry-specific producer price indexes are from the OECD Indicators of Industrial Activities (Paris, OECD, various quarterly issues).

^{13.} A similar equation is used to measure changes in total U.S. gross domestic product. See, for example, "A Look at How BEA Presents the National Income and Product Accounts," SURVEY 76 (May 1996): 36.

^{14.} The rewritten Fisher quantity index is as follows:

^{16.} In contrast to the computation of the index for each country, the current-local-currency estimates (such as $p_{i1}q_{i1}$) for each country had to be translated to a common currency before they could be used in computing the index for the 19 countries combined. The current-local-currency estimates for all years (1982-94) were translated to U.S. dollars using the PPP exchange rates for 1993, yielding dollar-denominated series that reflected host-country price conditions. Though not true PPP-based current-dollar series (because they reflected foreign rather than U.S. price conditions), these dollar-denominated series had to be constructed as an intermediate step in deriving an extrapolator for the base-year aggregate.

^{17.} As noted earlier, the data underlying the estimates for such countries typically would have been translated into dollars by MNC's on a daily basis.

^{18.} These limitations notwithstanding, future refinements to the estimates might include incorporating PPP-exchange-rate data for some of these

these methodological limitations, real gross product estimates were not produced for these countries individually.

Despite the widespread divergences of MER's from PPP exchange rates, there is reason to believe that the cruder methodology provides reasonable estimates at a highly aggregated level. MER's and PPP exchange rates may tend to converge over the long term, particularly for groups of countries (because the overvaluation of some currencies, in a PPP sense, may tend to be offset by the undervaluation of others). In addition, the real gross product estimates for this group of countries tend to track—with, as would be expected, a lead—long-term changes in MOFA employment during 1982—94.

A Fisher quantity index for extrapolating the base-year estimates of all countries combined was derived using the same data and procedure used to create the index for the 19 OECD countries except that the estimates for all other countries combined were included in the computation as an additional observation.

Appendix: Purchasing-Power-Parity Exchange Rates

To compare gross product among countries, a common unit of measure, such as the U.S. dollar, is needed. To translate gross product estimates denominated in foreign currencies into U.S. dollars for international gross product comparisons, PPP exchange rates should be used, because they approximate the number of foreign currency units required in a foreign country to buy goods and services that are equivalent to those that can be bought in the United States with 1 U.S. dollar.²⁰

PPP exchange rates are derived by comparing the domestic prices for goods and services in different countries. For example, in a hypothetical one-good, two-country world economy, the PPP exchange rate would equal the ratio of the price of the good in one country to the price in the other country; if the good sold for 10 currency units in country A and 1 currency unit in country B, the PPP exchange rate would be 10 units of country A's

currency to 1 unit of country B's currency. However, in practice, the derivation of PPP exchange rates is much more complex because of the multitude of goods and services produced and because of the differences among economies in the relative importance of those goods and services. To deal with these complexities, PPP-exchange-rate formulas have been developed.

PPP-exchange-rate formulas

Simple two-country, or bilateral, comparisons are the most basic context in which to compute PPP exchange rates. The most widely used bilateral index is the Fisher formula, which is based on the Fisher Ideal Price Index.²¹ It is the geometric mean of the own-country-weighted and partner-country-weighted averages of prices (expressed in each country's currency) in the two countries for goods and services—traded and untraded alike—that are consumed in both countries.

The Fisher formula (PPP^F) is

$$PPP_{A:B}^{F} = \sqrt{\frac{\sum p_{Ai}q_{Ai}}{\sum p_{Bi}q_{Ai}} \times \frac{\sum p_{Ai}q_{Bi}}{\sum p_{Bi}q_{Bi}}},$$

where the *t*'s are individual goods and services, the *p*'s are prices, the *q*'s are quantities, and *A* and *B* are countries.

For multilateral comparisons, PPP exchange rates must be derived using formulas specifically designed to ensure that the direct comparison of any two currencies is consistent with all indirect comparisons of those currencies via third currencies. When such consistency exists, the exchange rates are said to have the property of "transitivity." For example, to be transitive, the exchange rate for U.S. dollars to German marks must equal the product of the exchange rate for U.S. dollars to Japanese yen and the exchange rate for Japanese yen to German marks. The multilateral PPP exchange rates that were used in this study are based on a formula that was simultaneously and independently developed in 1964 by Ödön Éltetö and Pál Köves and by Bohdan Szulc.²² The formula is often referred to simply as the "EKS method."23

countries—particularly those whose economies are relatively advanced and are not experiencing hyperinflation.

^{19.} A study by Craig S. Hakkio identifies a tendency for MER's to converge with PPP exchange rates over the long term. See "Is Purchasing Power Parity a Useful Guide to the Dollar?" *Economic Review*, Third Quarter 1992 (Federal Reserve Bank of Kansas City, 1992): 37–51. James R. Lothian and Mark P. Taylor find a similar result in "Real Exchange Rate Behavior: The Recent Float from the Perspective of the Past Two Centuries" *Journal of Political Economy*, 104, no. 3 (1996): 488–509.

^{20.} Mer's are, however, more appropriate than PPP exchange rates for some purposes, such as comparing the dollar-denominated production costs of MNC's in various countries.

Irving Fisher, The Making of Index Numbers (Boston: Houghton Mifflin, 1922).

English translations of these articles are being published in the January/February 1997 issue of Eastern European Economics 35, no. 1.

^{23.} This formula can be found in László Drechsler, "Weighting of Index Numbers in Multilateral International Comparisons," *Review of Income and Wealth* 19, no. 1 (March 1973): 17–34.

Developing PPP exchange rates

The task of producing a multilateral system of PPP exchange rates is formidable: A list of the goods and services that are common to a group of countries must be defined, and the items being compared must be similar in features and quality; price and quantity data for each item in each country must be collected; and the PPP exchange rates must be calculated.

Pioneering work in this area began in the 1950's. ²⁴ In 1968, the first organized effort to produce PPP exchange rates on an ongoing basis was undertaken

by the United Nations under the name International Comparison Project (ICP). The first results of the ICP, covering 1970, were published in 1975. The OECD countries, while continuing to participate in the ICP, began their own program to produce PPP exchange rates for member countries in the early 1980's. The PPP exchange rates used in this article were obtained from the OECD study covering 1993.

Lipsey, "The International Comparison Program: Current Status and Problems," in *International Economic Transactions: Issues in Measurement and Empirical Research*, edited by Peter Hooper and J. David Richardson (Chicago: University of Chicago Press, 1991): 437–64.

U.S. International Transactions, Fourth Quarter and Year 1996

By Christopher L. Bach

FOURTH QUARTER 1996

THE U.S. current-account deficit decreased to \$41.4 billion in the fourth quarter from \$47.9 billion (revised) in the third (table A). The deficits on goods and services and on investment income decreased, while net unilateral transfers increased.

In the capital account, net recorded inflows were \$68.0 billion in the fourth quarter, compared with net inflows of \$69.7 billion in the third, as both U.S. assets abroad and foreign assets in the United States accelerated by about the same amount.

The statistical discrepancy—errors and omissions in recorded transactions—was an outflow of \$26.6 billion in the fourth quarter, compared with an outflow of \$21.8 billion in the third.

The following are highlights for the fourth quarter of 1996:

- The deficit on goods fell, as exports increased and imports changed little.
- Capital outflows for U.S. assets abroad increased strongly, as a result of both large direct investment outflows and large-scale bank lending to meet a surge in demand for dollar credits at banks abroad.
- Capital inflows for foreign assets in the United States increased strongly, as a result of both exceptional net foreign purchases of U.S. Treasury securities by private foreigners and large borrowing by U.S. banks to meet a simultaneous surge in domestic and international loan demand.
- The U.S. dollar appreciated 1 percent on a trade-weighted average basis for the quarter.

r Revised.

^{1.} Quarterly estimates of U.S. current- and capital-account components are seasonally adjusted when statistically significant seasonal patterns are present. The accompanying tables present both adjusted and unadjusted estimates.

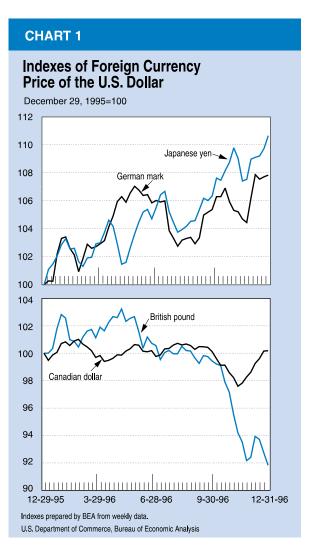

P Preliminary.

U.S. dollar in exchange markets

On a quarterly average basis, the U.S. dollar appreciated 2 percent against the European currencies and 4 percent against the Japanese yen (table B, chart 1).

The dollar's appreciation against the European currencies was supported by continued large

interest-rate differentials in favor of U.S. assets (charts 2 and 3). These differentials reflected somewhat different economic prospects in the two areas. In the United States, economic data portrayed continued expansion and little inflationary pressure. In Europe, prospects were less positive than in the United States, in part because of the monetary and fiscal restraint required by Germany

and other countries to meet the convergence requirements for implementation of the European Monetary Union (EMU).

The dollar appreciated to a 45-month high at quarterend against the Japanese yen; despite some recovery in the Japanese economy, the quarterly real growth pattern remained erratic, and substantially higher yields were available on assets abroad than on Japanese assets. Yields on U.S. Government bonds exceeded those on Japanese bonds by 400 basis points, and U.S. and most foreign stock prices increased strongly in the quarter, while Japanese stock prices declined 10 percent; the decline in Japanese stock prices partly reflected the failure of several Japanese financial institutions and a further decline in the value of Japanese bank assets. In this environment, net capital outflows from Japan were large in October and November; some of these outflows were into German marks.

The dollar depreciated 5 percent against the British pound. Rising interest-rate differentials in favor of British assets, stronger expansion than in some other European countries, and the pound's isolation from some of the uncertainties surrounding other European currencies led the pound to its highest level against the dollar in 4 years.

The dollar appreciated 5 percent against the Mexican peso, mostly in October and November, following a several quarters of relative stability.

Current Account

Goods and services

The deficit on goods and services decreased to \$26.3 billion in the fourth quarter from \$34.3 billion in the third. The deficit on goods decreased substantially, and the surplus on services increased.

Goods.—The deficit on goods decreased to \$45.3 billion in the fourth quarter from \$51.9 billion in the third. The reduction resulted from a much larger increase in exports than in imports.

Exports.—Exports increased \$8.2 billion, or 5 percent, to \$158.4 billion in the fourth quarter. Quantity increased 7 percent.² Nonagricultural goods accounted for nearly all of the increase in value.

Nonagricultural exports increased \$7.8 billion, or 6 percent, to \$142.9 billion. Quantity increased 6 percent. Nearly three-fourths of the increase in value was attributable to capital goods. Within capital goods, almost 40 percent of the increase was accounted for by a surge in aircraft Among other capital goods, semideliveries. conductors and telecommunications equipment recovered somewhat after three quarters of decline; however, computers, peripherals, and parts again changed little. Industrial supplies and materials increased only moderately, largely in energy products, chemicals, and paper and paper products. Consumer goods also increased. Automotive products decreased, reflecting a drop in parts shipped to Canada as a result of strikes against a U.S. manufacturer during the quarter.

Agricultural exports increased \$0.4 billion, or 3 percent, to \$15.4 billion. Quantity increased 10 percent. The increase in value was attributable to corn, largely to the Republic of Korea and other developing countries in Asia; cotton, to the developing countries in Asia; and soybeans, largely to Western Europe and China. The prices of soybeans and wheat fell sharply in the quarter.

Imports.—Imports increased \$1.7 billion, or 1 percent, to \$203.7 billion in the fourth quarter. Quantity was unchanged. Petroleum and nonpetroleum imports each accounted for about one-half of the increase in value.

^{2.} Quantity estimates are in chained (1992) dollars; price indexes are chain-type measures.

Nonpetroleum imports increased \$0.9 billion, or less than 1 percent, to \$184.9 billion. Moderate increases in consumer goods and capital goods were partly offset by a sizable drop in automotive products; passenger cars and parts imported from Canada fell substantially as a result of strikes against a U.S. manufacturer.

Petroleum imports increased \$0.8 billion, or 4 percent, to \$18.8 billion. The increase was attributable to a rise in price to an average \$22.31 per barrel from \$19.57 per barrel. The average number of barrels imported daily decreased to 9.21 million from 10.04 million. Consumption increased 3 percent, production changed little, and inventories were down 2 percent.

Services.—The surplus on services increased to \$19.0 billion in the fourth quarter from \$17.6 billion in the third. Travel and passenger fares accounted for most of the increases in both service receipts and service payments.

Foreign visitors spent \$16.5 billion in the United States, up 5 percent. Receipts from overseas visitors were \$14.1 billion, up 7 percent; receipts from Canada were \$1.7 billion, up 4 percent; and receipts from Mexico were \$0.7 billion, down 7 percent. U.S. travelers spent \$12.5 billion abroad, up 5 percent. Payments to overseas residents were \$9.9 billion, up 7 percent; payments to Canada were \$1.1 billion, up 4 percent; and payments to Mexico were \$1.4 billion, down 4 percent.

Passenger fare receipts were \$5.0 billion, up 5 percent, and passenger fare payments were \$3.7 billion, also up 5 percent.

"Other" transportation receipts increased \$0.2 billion, to \$7.5 billion, as a result of higher port expenditure receipts; "other" transportation payments were unchanged at \$7.5 billion.

Royalties and license fee payments decreased \$0.4 billion, to \$1.6 billion; third-quarter payments had been boosted by a one-time \$0.5 billion payment for broadcast rights to the Summer Olympic Games.

"Other" private service receipts were virtually unchanged at \$17.0 billion, and "other" private service payments increased \$0.2 billion, to \$9.7 billion, as a result of higher payments for financial services.

Transfers under U.S. military sales contracts were \$3.9 billion, up from \$3.3 billion, as a result of a bunching in deliveries of armored vehicles to several countries. Direct defense expenditures abroad were unchanged at \$2.8 billion.

Investment income

The deficit on investment income decreased to \$2.4 billion in the fourth quarter from \$4.1 billion in the third, as receipts increased more than payments.

Direct investment income.—Income receipts on U.S. direct investment abroad increased to \$27.3 billion in the fourth quarter from \$23.9 billion in the third. Earnings were especially strong in Western Europe and were spread across finance, manufacturing, and petroleum affiliates.

Income payments on foreign direct investment in the United States were \$9.0 billion in the fourth quarter, down slightly from \$9.1 billion in the third. A decrease in interest payments was nearly offset by an increase in earnings.

Portfolio investment income.—Receipts of income on "other" private investment were \$24.5 billion in the fourth quarter, up from \$23.6 billion in the third, mostly as a result of higher claims. Payments of income on "other" private investment were \$26.1 billion, up from \$25.2 billion, mostly as a result of higher liabilities.

Receipts of income on U.S. Government assets dropped to \$0.8 billion from \$1.3 billion. In the first three quarters, receipts had been boosted by interest earned on holdings of Mexican pesos under short- and medium-term swap arrangements; however, the Mexican Government repaid a large part of the swaps in the third quarter so that U.S. holdings of pesos were considerably lower in the fourth quarter. Payments of income on U.S. Government liabilities were \$19.9 billion, up from \$18.5 billion.

Unilateral transfers

Net unilateral transfers were \$12.6 billion in the fourth quarter, up from \$9.5 billion in the third. Nearly all of the increase was attributable to U.S. Government grants, which rose to \$5.4 billion from \$2.6 billion as a result of cash grants to Israel—\$1.8 billion under the credit waiver program to finance military purchases and \$1.2 billion to finance economic purchases. These funds were drawn in their entirety as soon as the U.S. Congress appropriated funds early in the new fiscal year.

Capital Account

Net recorded capital inflows—that is, net changes in U.S. assets abroad less net changes in foreign assets in the United States—were \$68.0 billion in the fourth quarter, compared with net inflows of \$69.7 billion in the third, as both U.S. assets abroad

and foreign assets in the United States accelerated by about the same amount.

U.S. assets abroad

U.S. assets abroad increased \$114.1 billion in the fourth quarter, compared with an increase of \$73.3 billion in the third. Direct investment outflows and U.S. claims on foreigners reported by U.S. banks were sharply higher in the fourth quarter than in the third.

U.S. official reserve assets.—U.S. official reserve assets increased \$0.3 billion in the fourth quarter, following a \$7.5 billion decrease in the third. The decrease in the third quarter was largely from repayment of Mexican swap arrangements (table C).

Claims reported by U.S. banks.—U.S. claims on foreigners reported by U.S. banks increased \$56.7 billion in the fourth quarter, compared with an increase of \$33.2 billion in the third.

Banks' own claims payable in dollars increased \$56.2 billion in the fourth quarter, following an \$8.7 billion increase in the third. The increase in the fourth quarter was to meet the surge in demand for dollar credits in the Eurodollar market, to finance corporate merger and acquisition activity, which remained strong, and to finance substantial net foreign purchases of U.S. Treasury securities. Lending to offices in the Caribbean and London for yearend bookkeeping purposes was sizable, but not as large as in some recent years. Lending by U.S. securities dealers to international bond funds in the Caribbean also surged, primarily in November and December; a large part of this lending was likely in the form of resale agreements. Some of the funding for these loans was obtained from abroad.

Foreign securities.—Net U.S. purchases of foreign securities were \$27.0 billion in the fourth quarter, up from \$22.9 billion in the third.

Net U.S. purchases of foreign bonds were \$17.1 billion, up from \$14.9 billion, largely reflecting strength in new foreign bond issues in the United States. By type of issuer, new issues by private corporations increased to \$11.2 billion from \$6.4 billion. By country, new issues from the emerging countries of Asia and Latin America increased to \$11.2 billion from \$9.4 billion. Gross trading activity (purchases plus sales) increased 15 percent.

Net U.S. purchases of foreign stocks were \$9.9 billion, up from \$8.0 billion. Net purchases in the United Kingdom were \$4.1 billion, up from \$1.7 billion; net purchases in other European countries were also up. Net purchases in emerging market countries were down slightly, but remained strong. Gross trading activity increased 28 percent.

Direct investment.—Net capital outflows for U.S. direct investment abroad were \$29.8 billion in the fourth quarter, compared with \$9.1 billion in the third. A large shift to intercompany debt outflows, a strong increase in reinvested earnings, and an increase in equity capital outflows contributed to a step-up in total outflows to a level that was somewhat higher than in the first two quarters of 1996. The \$14.6 billion shift to intercompany debt outflows was more than accounted for by transfers of funds from U.S. parents to financial affiliates abroad, mostly to securities brokers and dealers in the United Kingdom.

Foreign assets in the United States

Foreign assets in the United States increased \$182.0 billion in the fourth quarter, compared with an increase of \$143.0 billion in the third. Net foreign

P Preliminary.

1. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

2. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.

Foreign official assets.—Foreign official assets in the United States increased \$33.0 billion in the fourth quarter, compared with an increase of \$24.2 billion in the third. In the fourth quarter, assets of non-opec developing countries increased at more than triple the pace in the third quarter, while assets of industrial countries slowed to only a small increase (table C).

Liabilities reported by banks.—U.S. liabilities reported by U.S. banks other than U.S. Treasury securities increased \$33.2 billion in the fourth quarter, in contrast to a \$1.2 billion decrease in the third.

Banks' own liabilities payable in dollars increased \$40.0 billion in the fourth quarter, following a \$2.4 billion decrease. U.S. banks borrowed heavily to finance the simultaneous increases in domestic and foreign demand for dollar credits, which included dollar credits to finance the surge in net foreign purchases of U.S. Treasury securities by private foreigners. Most of the borrowing was from offices in the Caribbean and London, particularly in October and December. U.S. banks' liabilities payable in foreign currencies decreased \$7.3 billion, following a \$0.5 billion decrease.

U.S. Treasury securities.—Net foreign purchases of U.S. Treasury securities were a record \$67.3 billion in the fourth quarter, up from \$43.4 billion in the third. Sharply rising bond prices, a large interest differential in favor of U.S. assets over foreign assets, and dollar appreciation were major factors contributing to the surge.

Net purchases by international bond funds in the Caribbean accelerated to \$28.5 billion from \$5.5 billion; large net purchases, mostly in November and December, were partly financed by borrowing from U.S. securities dealers. Net purchases by Western Europe remained strong at \$28.3 billion, compared with \$27.5 billion. Net purchases by Japan and other Asian countries accelerated to \$16.6 billion from \$12.6 billion. Gross trading activity increased 31 percent.

Other U.S. securities.—Net foreign purchases of U.S. securities other than U.S. Treasury securities were \$31.7 billion in the fourth quarter, down from \$34.8 billion in the third.

Net foreign purchases of U.S. corporate and other bonds were \$30.8 billion, down from \$33.3 billion. New bond issues sold abroad by U.S. cor-

porations remained strong at \$14.6 billion, up from \$13.7 billion. Net foreign purchases of outstanding corporate bonds dropped to \$3.4 billion from \$7.4 billion. Net foreign purchases of outstanding and newly issued U.S. agency bonds increased slightly to \$12.8 billion from \$12.2 billion. Gross trading activity of corporate and other bonds increased 43 percent.

Net foreign purchases of U.S. stocks were \$1.0 billion, down from \$1.6 billion. Although U.S. stock prices rose 8 percent on strong corporate earnings, net purchases weakened. However, gross trading activity increased 31 percent and was heavy throughout the quarter.

Direct investment.—Net capital inflows for foreign direct investment in the United States were \$16.8 billion in the fourth quarter, compared with \$21.1 billion in the third. A large shift to intercompany debt outflows to foreign parent groups more than accounted for the drop. Equity inflows accelerated strongly as a result of several large acquisitions by investors from Western European countries.

THE YEAR 1996

The U.S. current-account deficit increased to \$165.1 billion in 1996 from \$148.2 billion in 1995. The deficits on goods and services and on investment income increased, as did net unilateral transfers (table D).

In the capital account, the increase in U.S. assets abroad changed little, while the increase in foreign assets in the United States was sharply higher. Consequently, net capital inflows to the United States increased by a very substantial amount.

The statistical discrepancy—errors and omissions in recorded transactions—was an outflow of \$53.1 billion in 1996, in contrast to an inflow of \$31.5 billion in 1995. The large shift is partly a reflection of the volatility in financial flows in both years.

The following are highlights for the year 1996:

- Goods exports and goods imports each increased one-half as much as in 1995. Exports reflected the second year of slowing in economic expansion in industrial countries abroad; expansion in both 1995 and 1996 was considerably slower than the peak expansion in 1994. Imports reflected the second year of slower expansion in the U.S. economy; growth in 1995 and 1996 averaged 2.2 percent, well below the 3.5-percent growth in 1994.
- The pace of expansion in securities transactions far exceeded the more moderate pace of

expansion in international banking transactions. Net foreign purchases of U.S. Treasury securities by private foreigners exceeded by a substantial margin the record established in 1995. Likewise, net foreign purchases of U.S. securities other than U.S. Treasury securities exceeded by a substantial margin the record established in 1995. Gross trading activity in these securities transactions was 25 percent greater than in 1995.

- U.S. banks were more active in international markets than in recent years, borrowing and leading in response to strong demands for dollar credits both at home and abroad. Some of the banking activity was intertwined with, and an integral part of, securities transactions, including transactions in derivative instruments and repurchase agreements. Thus, capital inflows to U.S. banks were especially large in the fourth quarter to meet the simultaneous surge in both domestic and international loan demand, and capital outflows from U.S. banks were especially large in the second half of the year in order to meet the demand for dollar credits at banking offices abroad and to finance large net foreign purchases of U.S. securities.
- Net capital inflows for foreign direct investment in the United States eclipsed by a substantial amount the record inflows established during the last boom in 1987–89.

U.S. dollar in exchange markets.—The U.S. dollar appreciated 4 percent on a trade-weighted average basis from the end of December 1995 to the end of December 1996. On a bilateral basis, the dollar appreciated 8 percent against the German mark and 12 percent against the Japanese yen, and it depreciated 7 percent against the British pound (table B, chart 1).

The dollar's appreciation from its recent low in April 1995 to the end of December 1996 was 8

percent on a trade-weighted average basis. On a bilateral basis, the dollar appreciated 13 percent against the German mark and 36 percent against the Japanese yen, and it depreciated 3 percent against the British pound.

In the first half of 1996, perceptions were widespread that monetary easing in Europe would proceed at a faster pace than in the United States, given the slowing of expansion in Europe and given the strengthening of expansion in the United States. These perceptions were supported by the release of weak economic data for Germany, while economic data for the United States indicated a pickup from weak growth in the second half of 1995. Thus, U.S. bond prices weakened because of inflationary fears, which pushed yields substantially higher, simultaneous with a continued strong increase in U.S. stock prices. These developments led to a sizable increase in interest-rate differentials in favor of U.S. assets over European assets and provided considerable support to the dollar in exchange markets. Interest-rate differentials of U.S. assets over Japanese assets were even larger than those over European assets, as Japanese interest rates reflected an economy that had failed to grow throughout 1995 and that had shown only erratic growth in the first half of 1996. Japanese monetary authorities were reported to have intervened in exchange markets to limit the rise of the yen against the dollar at times during the first quarter when market participants expected that Japanese interest rates might rise.

The dollar's advance was briefly interrupted in July, when a 10-percent decline in U.S. stock prices contributed to a sharp, temporary drop in the value of the dollar against most foreign currencies. In other developments in the third quarter, release of the June nonfarm payroll report in July suggested strengthening in the U.S. economy and implied a possible tightening of monetary policy. However, subsequent inflation reports indicated that

r Revised.

P Preliminary

inflation remained moderate, and the release of the July and August Federal Open Market Committee meeting results confirmed that monetary policy was unchanged. In Europe, interest rates in many European countries drifted lower, and in Germany, the Bundesbank lowered the repurchase rate 30 basis points. Anticipated downward pressures on European currencies during the release of government budgets did not materialize as countries sought to meet the stringent economic convergence criteria required for membership in the European Monetary Union. In Japan, the value of the yen against the dollar fell further in August and September, when the release of the secondquarter GDP report indicated that the Japanese economic recovery was not yet firmly established.

Early in the fourth quarter, additional economic data confirmed the erratic pattern of the Japanese recovery, and Japanese stock and bond prices declined by substantial amounts, reflecting a further deterioration in confidence in the economy, failures of several financial institutions, and declines in the asset values of many financial institutions. The interest-rate differential in favor of U.S. bonds over Japanese bonds rose to 400 basis points, and Japanese stock prices fell while those in the United States continued to rise. In this environment, large capital outflows in search of much higher returns available on foreign assets put downward pressure on the yen. In October and November, net capital outflows from Japan exceeded 1 trillion yen (\$9 billion) each month. Another factor that contributed to capital outflows was the reported reallocation by Japanese financial institutions of additional funds from domestic to international portfolios at the start of the Japanese fiscal half-year on October 1. Consequently, the dollar continued to appreciate strongly against the yen through yearend.

The dollar traded in a narrow range against the British pound for much of the year. However, in the fourth quarter, a sharp rise in British short-term interest rates and the release of reports indicating an acceleration in British real GDP growth led to a sizable decline of the dollar against the pound.

Against the newly industrialized countries of the Far East, the U.S. dollar appreciated 9 percent against the South Korean won and appreciated 1 percent against the Taiwan dollar. The dollar was unchanged against the Hong Kong dollar and depreciated 1 percent against the Singapore dollar.

Current Account

Goods and services

The deficit on goods and services increased to \$114.2 billion in 1996 from \$105.1 billion in 1995. The larger deficit on goods more than accounted for the increase; the surplus on services increased.

Goods.—The deficit on goods increased to \$187.7 billion in 1996 from \$173.4 billion in 1995 and \$166.1 billion in 1994. Both exports and imports increased, but by only about one-half the dollar amounts they had increased in 1995 (tables E and F).

U.S. exports slowed sharply in 1996 from a record increase in 1995, reflecting considerably slower eco-

P Preliminary.

 Because chain indexes use weights of more than one period, the corresponding chained dollar estimates are

nomic expansion in the industrial countries abroad and slightly slower economic expansion in the developing countries of Asia. On an annual basis, economic expansion in Germany and the other continental European countries, in the United Kingdom, and in Canada slowed further in 1996 from 1995. Expansion in Japan was faster. Expansion in the developing countries of Asia was slightly slower than in 1995, while expansion in Latin America (especially in Mexico) was faster than in 1995. When measured as a percent change from four quarters earlier, some countries showed a pickup in expansion within the year 1996 (chart 4).

U.S. imports also slowed sharply from a record increase in 1995, reflecting the second year of slower growth in the U.S. economy. Growth in U.S. real gross domestic product (GDP) was 2.4 percent in 1996 and 2.0 percent increase in 1995; both years were well below real GDP growth of 3.5 percent in 1994.

Domestic prices of exports decreased in 1996: The largest declines were in industrial supplies and materials and in capital goods; price increases for agricultural goods remained high (table G). However, prices increased slightly for many major categories when converted into foreign currencies, as depreciation of foreign currencies offset much of the decrease in domestic prices or added to domestic price increases (table H).

Dollar prices of most imports decreased or changed little in 1996. However, the prices of nonpetroleum industrial supplies and materials increased somewhat, and prices of petroleum increased sharply.

Exports.—Nonagricultural exports increased \$31.5 billion, or 6 percent, to \$550.2 billion in 1996, down sharply from a 14-percent increase in 1995. Quantity increased 9 percent, down from an 11-percent increase. In value, nonagricultural industrial supplies and materials slowed to a \$2.2 billion increase in 1996 from a \$22.9 billion increase in 1995, and capital goods slowed to a \$19.1 billion increase from a \$28.5 billion increase in 1995. Consumer goods increased slightly more than in 1995, and automotive products increased less (chart 5).

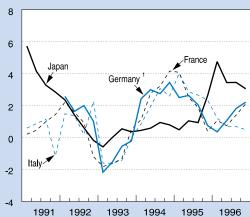

Capital goods increased \$19.1 billion, or 8 percent, to \$252.9 billion in 1996, down from a 14-percent increase in 1995. Quantity increased 13 percent, down from a 16-percent increase. Prices of capital goods declined 4 percent, following a 2-percent decline; prices of computers and semiconductors declined at a considerably more rapid pace than in 1995, while prices of other capital

U.S. Department of Commerce, Bureau of Economic Analysis

^p Preliminary

goods increased at about the same pace as in 1995. In value, semiconductors increased only 4 percent in 1996 after a 36-percent increase in 1995, as a result of an oversupply that began in late 1995 and continued throughout most of 1996. Exports of semiconductors had grown exceptionally rapidly in 1991–95. Computers, peripherals, and parts slowed to a 10-percent increase from a 19-percent increase in response to a marked slowing in sales; exports of these items had grown exceptionally rapidly in 1994-95. Telecommunications equipment was unchanged in 1996, following 4 years of exceptional growth. "Other" industrial, agricultural, and service industry machinery also slowed, reflecting slower economic expansion in major industrial countries. Partly offsetting the slowing in all of these categories was a substantial increase in

deliveries of aircraft and aircraft parts after 3 years of recession in the industry (table I).

Industrial supplies and materials increased \$1.3 billion, or 1 percent, to \$147.7 billion in 1996, following an increase of 20 percent in 1995. Quantity increased 6 percent in both years. Prices decreased 5 percent, following a 13-percent increase. Sizable price declines—particularly for such key commodities as paper, iron and steel, and chemicals—magnified the impact of slower economic expansion abroad in 1996. In value, paper and paper-based stocks decreased substantially in

Note.—Chain-weighted price indexes multiplied by trade-weighted exchange rate index of the currencies of Belgium, Canada, France, Germany, Italy, Japan, Netherlands, Sweden, Switzerland, and the United Kingdom.

1996, following an exceptionally large increase in 1995; a 27-percent decline in price contributed to the decrease. One-third of the decrease in value was with the major paper products markets of Japan and Canada. Chemicals decreased a small amount in value, following exceptional increases in 1994 and 1995; prices declined 5 percent. Decreases in chemicals to Taiwan, China, and Mexico more than accounted for the decrease. Iron and steel products dropped in value; prices declined 4

percent. Nonmonetary gold increased, offsetting some of the decreases in value of other commodity categories (tables F and J).

Automotive products increased \$2.6 billion, or 4 percent, to \$64.5 billion in 1996, down from a 7-percent increase. Quantity increased 3 percent, down from a 6-percent increase. In value, shipments of trucks, buses, and automotive parts, largely to Mexico, were higher than last year. The increase in parts to Mexico and decrease in parts to

 $^{^{\}it p}$ Preliminary.

Canada reflected the continued relocation of production to Mexico from Canada. Strikes at a U.S. manufacturer late in the year also slowed parts and passenger cars to Canada.

Consumer goods increased \$5.7 billion, or 9 percent, to \$70.2 billion in 1996, up from a 7-percent increase. Quantity increased 8 percent, following a 6-percent increase. In value, shipments picked up substantially to Latin America, especially Mexico, and picked up slightly to Western Europe.

Agricultural products increased \$4.2 billion, or 7 percent, to \$61.4 billion in 1996, down from a 22-percent increase in 1995. The slowdown was largely in quantity, which shifted to a 2-percent decrease from a 12-percent increase. In value, a recovery in world production of cotton sharply reduced U.S. cotton exports, while shortfalls in world production of feeds and grains led to record U.S. corn and soybean exports. Wheat exports reached the highest level since 1984.

Soybeans increased \$1.9 billion, up 12 percent in quantity and up 24 percent in price. In value, increases were largely to China, Mexico, the newly industrialized countries in Asia, and other developing countries in Asia.

Corn increased \$1.2 billion, down 16 percent in quantity and up 32 percent in price. In value, shipments to Mexico alone accounted for \$0.7 billion of the rise, as severe drought spurred demand for imported grains and feeds. Shipments to Japan increased \$0.6 billion, and shipments to China decreased \$0.6 billion as Chinese production recovered from diminished output during the 1994–95 crop year.

Wheat increased \$0.7 billion, down 4 percent in quantity and up 17 percent in price. In value, increases were mostly to Mexico, Brazil, Japan, and Africa.

Cotton decreased \$1.0 billion, down 15 percent in quantity and up 11 percent in price, as foreign output recovered and eased the tight supply situation of last year.

Imports.—Nonpetroleum imports increased \$36.8 billion, or 5 percent, to \$731.0 billion in 1996, down from a 12-percent increase in 1995. Quantity increased 8 percent, down from a 10-percent increase. In value, capital goods slowed to a \$7.5 billion increase in 1996 from a \$37.1 billion increase in 1995, and nonpetroleum industrial supplies and materials slowed to a \$7.3 billion increase from a \$15.2 billion increase. Automotive products and consumer goods slowed by only small amounts (chart 5).

Capital goods increased \$7.5 billion, or 3 percent, to \$229.0 billion in 1996, down from a 20-percent

Quantity increased 12 percent, down from a 22-percent increase. Prices decreased 7 percent, following a 2-percent decrease, as computer and semiconductor prices declined even more rapidly than in 1995. In value, an oversupply of semiconductors led to a \$2.3 billion decrease, following a \$12.9 billion increase, and a dropoff in sales of computers led to an increase of only \$5.2 billion, following an increase of \$10.1 billion; growth had been exceptionally strong in 1991–95 for both semiconductor and computer imports. Telecommunications equipment decreased \$1.0 billion, following an increase of \$1.1 billion. "Other" industrial, agricultural, and service industry machinery also increased by a substantially smaller amount than in 1995 (table I).

Nonpetroleum industrial supplies and materials increased \$7.3 billion, or 6 percent in 1996, down from a \$15.2 billion increase. Quantity increased 7 percent, compared with a 4-percent increase. Prices decreased 2 percent, in contrast to a 9-percent increase. In value, paper and paperbase products decreased following an exceptionally large increase in 1995; prices fell 8 percent in 1996, following a 38-percent increase in 1995. Chemicals, after exceptional increases in 1994–95, also increased less in value, and included a 2-percent decrease in prices. Bauxite and aluminum, largely from Russia and Canada, were sharply lower. Other categories showing increases in value were lumber (largely from Canada), building materials, iron and steel mill products, and nonmonetary gold (tables F and J).

Consumer goods increased \$11.1 billion, or 7 percent, to \$171.1 billion in 1996, down from a 9-percent increase. Quantity increased 7 percent, down from an 8-percent increase. Consumer goods from Hong Kong, the Republic of Korea, Singapore, and Taiwan decreased sharply, while those from China increased. Household products and toys increased the most. Television, radio, and stereo products decreased.

Automotive products increased \$5.3 billion, or 4 percent, to \$130.0 billion in 1996, down from a 6-percent increase. Quantity increased 4 percent, following a 3-percent increase. Completed cars from Canada fell, as a result of both strikes at a U.S. manufacturer late in the year and the continuing transfer of assembly operations to Mexico. Imports of cars and parts from Japan continued to decline. New car sales in the United States decreased 1 percent.

Petroleum imports increased \$13.2 billion, or 24 percent, to \$68.3 billion in 1996, up from a 7-percent increase. Nearly all of the increase in

1996 resulted from a rise in prices to an average of \$19.76 per barrel from \$16.09 per barrel. Quantity increased slightly to 9.46 million barrels per day from 9.37 million barrels. The number of barrels imported from OPEC was unchanged from that in 1993, 1994, and 1995, and OPEC's share of total petroleum imports was slightly lower at 48 percent. In quantity, imports from Saudi Arabia decreased 11 percent, imports from both Mexico and Nigeria were unchanged, and imports from Venezuela increased 10 percent (chart 6).

U.S. consumption of petroleum and products increased 3 percent to 18.2 million barrels per day. The gap between consumption and supplies provided by domestic production and imports was made up by a 3-percent reduction in inventories—the third year of decline in inventories. Imports as

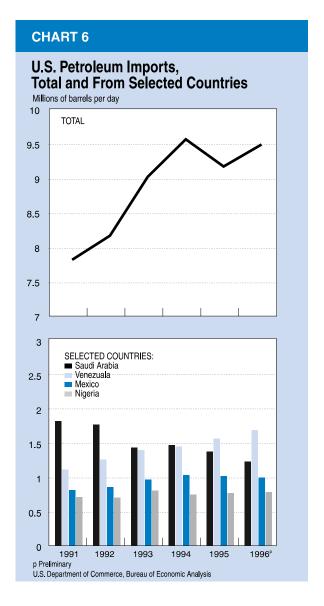

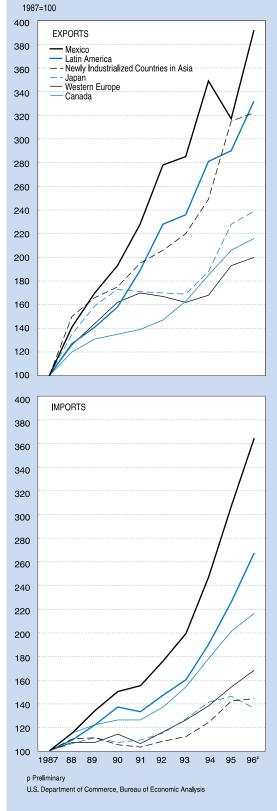

CHART 7

Growth in U.S. Exports and Imports of Goods by Selected Areas and Countries

a percent of consumption decreased to 52 percent from 53 percent.

Balances by area.—As noted earlier, the U.S. deficit on goods increased to \$187.7 billion in 1996 from \$173.4 billion in 1995.

The deficit with Western Europe increased to \$24.1 billion from \$15.2 billion. Exports of industrial supplies and materials and of capital goods slowed sharply in response to the deceleration in economic expansion abroad over the past 2 years, while imports of capital goods slowed in response to the second year of only moderate expansion in the United States (table K, chart 7).

The deficit with Japan decreased to \$49.2 billion from \$60.4 billion. Exports of industrial supplies and materials (especially paper and chemicals) and capital goods (especially semiconductors and electronic components) slowed, while imports

of industrial supplies and materials and of capital goods (especially electronic components) fell by substantial amounts.

The deficit with Latin America increased to \$15.3 billion from \$10.7 billion. Higher exports in most major commodity categories (mainly to Mexico) partly offset some of the continued strength in all major categories of imports, including higher imports of petroleum from Venezuela.

The deficit with the developing countries of Asia increased to \$75.7 billion from \$69.1 billion. Exports of capital goods slowed sharply and of industrial supplies and materials fell by a substantial amount. Imports of capital goods, largely computers and semiconductors from Hong Kong, the Republic of Korea, Singapore, and Taiwan, increased by only one-fifth the amount in 1995. Imports of consumer goods from the Hong Kong, the Republic of Korea, Singapore,

and Taiwan decreased, but remained strong from China.

Services.—The surplus on services increased to \$73.5 billion in 1996 from \$68.4 billion in 1995, a smaller increase than in 1995 (table L).

In 1996, service receipts increased \$13.8 billion, or 6 percent, down from an 8-percent increase. Although "other" private services and travel both increased more in 1996 than in 1995, weakness in "other" transportation held down the increase in total receipts. Service payments increased \$8.2 billion, or 6 percent, unchanged from last year's percentage increase. As with receipts, "other" private services and travel both increased more in 1996 than in 1995, but weakness in "other" transportation held down the increase in total payments.

Foreign visitors spent \$64.5 billion for travel in the United States in 1996, an increase of 5 percent. Receipts from overseas increased 5 percent, following a 10-percent increase; part of the weakening was attributable to the airline disaster in July, which slowed international travel for several months. Dollar appreciation against European

and Japanese currencies also slowed travel to the United States. Receipts from Mexico increased 7 percent, following the 41-percent decline in 1995 that was brought about by the devaluation of the Mexican peso in December 1994. Receipts from Canada increased 9 percent, following a 1-percent decrease.

U.S. travel payments increased 6 percent to \$48.7 billion. Payments to overseas increased 6 percent, up from a 5-percent increase. Payments to Mexico increased 11 percent after no change, partly as a result of appreciation of the dollar against the peso in 1996. However, rapid inflation in Mexico offset some of the gains to U.S. travelers from the appreciated dollar. Payments to Canada increased 6 percent, following a 10-percent increase.

"Other" transportation receipts were \$29.1 billion in 1996, up 4 percent after a 9-percent increase in 1995, largely reflecting the slowdown in goods exports to an increase of 6 percent from 15 percent. Reduced overseas demand for U.S. exports had a large impact on ocean export volumes, resulting in a decrease in ocean freight receipts. Air and truck freight receipts were higher. Port service receipts were up slightly.

"Other" transportation payments were unchanged at \$29.1 billion in 1996, following a 4-percent increase in 1995, largely reflecting a slowdown in goods imports to an increase of 7 percent from 12 percent. The slowdown had the greatest impact on ocean import volumes, resulting in declines in payments for ocean freight and ocean port services. Air freight payments were slightly higher, reflecting higher air import volumes.

Royalties and license fee receipts increased \$1.9 billion, to \$28.8 billion, in 1996, the third year of strong increases. Royalties and license fees payments increased \$0.7 billion to \$7.0 billion, mostly as a result of one-time payments for broadcast rights to the Summer Olympic Games.

"Other" private service receipts were \$67.3 billion in 1996, up from \$61.7 billion in 1995. Financial services increased strongly as a result of the stepped up activity in U.S. financial markets. Business, professional, and technical services increased slightly more rapidly than in 1995.

"Other" private service payments were \$37.6 billion in 1996, up from \$34.0 billion in 1995. As with receipts, payments for financial services increased strongly as a result of stepped up activity in foreign financial markets.

Transfers under U.S. military agency sales contracts were \$13.8 billion in 1995, up from \$13.4 billion in 1995. Most of the increase in 1996 was in deliveries of aircraft, missiles, and weapons systems

Treliminary.

Consists of goods and services transferred under U.S. military agency sales contracts which cannot be separately identified.

Consists of imports of goods and services by U.S. defense agencies which cannot be separately identified.

to Western Europe. Aircraft deliveries to Saudi Arabia and Egypt were lower in 1996, and deliveries to Japan under major missile programs were largely completed early in the year.

Direct defense expenditures abroad were \$11.0 billion in 1996, up from \$9.8 billion in 1995. Much of the step-up was attributable to U.S. peacekeeping operations in Bosnia: Initially, costs of the U.S. presence changed little as troops were redeployed from other European locations; subsequently, the expanded U.S. presence entailed increased costs.

Investment income

The deficit on investment income increased to \$8.4 billion in 1996 from \$8.0 billion in 1995 (table D). Both direct and portfolio income receipts increased substantially, but by much less than last year's U.S. Government income payments accounted for much of the increase in income payments.

Direct investment income.—Receipts of income on U.S. direct investment abroad were \$98.3 billion in 1996, compared with \$88.9 billion in 1995 (table M, chart 8). Earnings were up for Western Europe; the much smaller increase in 1996 than in 1995 was partly attributable to slowing economic expansion in many of these countries. In the United Kingdom, a rise in earnings of finance affiliates largely reflected increased trading activity in securities and stepped-up merger and acquisition activity throughout Europe. Earnings at manufacturing affiliates in Mexico reflected strong production of goods for export (chart 9).

Payments of income on foreign direct investment in the United States were \$33.8 billion in

1996, compared with \$31.4 billion in 1995 (table M, chart 8). Earnings increased much less than the substantial increases in 1994 and 1995, reflecting continued moderate growth in the U.S. economy (chart 10).

Portfolio investment income.—Receipts of income on "other" private investment increased to a record \$94.1 billion in 1996 from \$89.1 billion in 1995; the previous record was \$91.5 billion in 1989 (table N, chart 8). The increase in 1996 was due to higher receipts of interest on bonds and dividends on stocks, as U.S. residents stepped up their holdings of foreign securities. Interest receipts by banks were held at the 1995 level, as a decline in interest rates offset a rise in bank claims.

Receipts of income on U.S. Government assets decreased to \$4.6 billion in 1996 from \$4.7 billion in 1995 (table O).

Primarily income of business concerns other than banks.

Payments of income on "other" private investment increased to a record \$100.2 billion in 1996 from the previous record of \$98.0 billion in 1995 (table N, chart 8). The increase in 1996 was due mostly to higher interest payments on bonds and, to a smaller extent, an increase in dividend payments on stocks, as foreign residents stepped up their holdings of U.S. securities. Interest payments on U.S. bank liabilities decreased as a result of a decline in interest rates and of little change in bank liabilities.

Payments of income on U.S. Government liabilities increased to \$71.3 billion in 1996 from \$61.3 billion in 1995. The increase in 1996 was not as large as in 1995 because a decline in interest rates held down the 1996 increase (table O).

Unilateral transfers

Net unilateral transfers were \$42.5 billion in 1996, compared with \$35.1 billion in 1995. Much of the increase was attributable to U.S. Government grants, which increased to \$14.6 billion from \$11.0 billion (table O). Grants for 1996 include some grants that were delayed as a result of the U.S. Government shutdown and budget impasse at the end of 1995. Under more normal circumstances, these grants would have been included in 1995 calendar year transfers. Grant disbursements for debt forgiveness fell to zero in 1996.

Other U.S. Government transfers increased to \$4.2 billion from \$3.4 billion, largely as a result of higher contributions to international organizations for peacekeeping operations.

Capital Account

Net recorded capital inflows—that is, net changes in U.S. assets abroad less net changes in foreign assets in the United States—were \$218.2 billion in 1996, compared with \$116.6 billion in 1995. An acceleration in foreign assets in the United States accounted for the larger net capital inflows.

Capital transactions in the U.S. international accounts in 1996, as well as those in 1995, reflect many of the same developments that have been reshaping world financial markets.

First, the size of financial flows as well as the level of financial activity has increased considerably on a net, as well as a gross, basis. A very favorable commercial and financial investment climate, both in the United States and abroad, has fostered these developments. Concurrently, quarter-to-quarter and year-to-year fluctuations in recorded capital flows in the U.S. accounts have become larger.

Second, securities transactions appear to have taken on a much greater role relative to banking transactions in the U.S. accounts. In some, but certainly not all, situations, the securities markets have served as an alternative to fund raising and risk management through traditional banking channels.

Third, the traditional distinction between banking transactions and securities transactions has now become unclear. The proliferation of new financial instruments and techniques—from the broader use of securitized assets and global bond issues to the use of swaps, forwards, futures, and options in both banking and securities

transactions—has contributed to the blurring of the distinction and has increased the complexities of interpreting capital flows in the context of the U.S. accounts.

Fourth, the use of repurchase agreements has now become widespread, and they serve as an important substitute for the acquisition of funds through interbank borrowing channels. In addition, repurchase agreements serve as yet another means to bridge the gap between cash and the futures markets.

Finally, many countries, particularly emerging market countries, have taken steps to deregulate financial markets and to improve their financial infrastructure, market surveillance, and financial settlements and clearing systems—all of which contribute to greater mobility of capital.

The development of new financial instruments and the sophisticated use of financial derivatives reflect fundamental changes in international finance. These changes affect portfolio, banking, and direct investment capital flows.

U.S. assets abroad

U.S. assets abroad increased \$306.8 billion in 1996, compared with an increase of \$307.9 billion in 1995. Net U.S. purchases of foreign securities and the increase in U.S. claims on foreigners reported by U.S. banks were higher in 1996 than in 1995; U.S. direct investment outflows were lower.

U.S. official reserve assets.—U.S. official reserve assets decreased \$6.7 billion in 1996, in contrast to

a \$9.7 billion increase in 1995. A decrease in foreign currency holdings more than accounted for the decrease in reserve assets in 1996 (table C).

Foreign currency holdings decreased \$7.6 billion, as Mexico repaid \$1.3 billion under short-term and \$7.0 billion under medium-term swap arrangements. Mexico also purchased special drawing rights from the United States for repayment of loans from the International Monetary Fund (IMF).

The U.S. reserve position with the IMF increased \$1.3 billion, partly as Russia borrowed dollars from the General Resources Account at the IMF.

U.S. monetary authorities did not intervene in the exchange markets in 1996.

U.S. Government assets other than official reserve assets.—Among these assets, U.S. Government credits and other long-term assets increased \$4.9 billion in 1996, up from an increase of \$4.6 billion, largely as a result of an increase in new credits disbursed by the Export-Import Bank. Partly offsetting was a decrease in new credits disbursed under agricultural and Commodity Credit Corporation legislative authorities. Little debt was rescheduled in 1996. Repayments on credits changed little (table O).

Claims reported by banks.—U.S. claims on foreigners reported by U.S. banks increased \$88.2 billion in 1996, following an increase of \$69.1 billion in 1995 (tables P and Q).

On a net basis—that is, banks' own claims payable in dollars less banks' own liabilities payable

in dollars—there were large net outflows, as the increase in bank outflows exceeded the increase in bank inflows. Net credits were extended to finance the strengthening in demand abroad for interbank credit, to finance heightened merger and acquisition activity, and to finance the large step-up in activity in securities markets. Net credits were nearly twice as large as in 1995, but presentation on a net basis masks considerable differences in the nature of activity on the asset and liability sides of the accounts. Therefore, the following discussion proceeds on a gross basis.

Banks' own claims payable in dollars increased \$70.6 billion in 1996, compared with a \$40.0 billion increase in 1995. Much of the increase in 1996 occurred in the third and fourth quarters when large amounts of credit were extended to foreign offices in Western Europe to meet a step-up in the demand for funds in the Eurodollar market, to finance heightened merger and acquisition activity that surpassed the previous year's record, and to finance, in part, the surge in European and Asian net purchases of U.S. Treasury securities. On a smaller scale, lending to emerging countries in Latin America resumed, reflecting these countries' ability to borrow more widely in international bank and capital markets in 1996, whereas, in 1995, this ability had been limited because of concerns over credit risk. Lending to Japan was limited for most of the year because of financial difficulties at Japanese banks, but it increased strongly in the fourth quarter.

Lending by U.S. brokers and dealers to international bond mutual funds in the Caribbean was strong in the fourth quarter; however, the increase for 1996 was not as large as that for 1995, partly because of offsetting inflows and outflows to these

mutual funds throughout the year. Many of these transactions are believed to be in the form of resale agreements, which have expanded very rapidly in the past several years. These resale agreements can

<sup>Preliminary.
1. Excludes liabilities to foreign official agencies.</sup>

serve as a substitute for interbank credits, that is, as a source of direct lending by securities dealers to bond mutual funds using U.S. Treasury securities as collateral.

Banks' domestic customers' claims increased \$25.7 billion, following a \$14.9 billion increase. Deposits shifted to a sizable increase, while foreign commercial paper placements fell somewhat but remained strong.

Banks' own claims payable in foreign currency shifted to an \$8.1 billion decrease from a \$14.3 billion increase. The shift primarily reflects a preference for dollar credits in 1996.

Foreign securities.—Net U.S. purchases of foreign securities were \$104.5 billion in 1996, up from \$99.0 in 1995 but well below the record \$146.3 billion in 1993 (table P, chart 11).

Stock prices in most major foreign countries continued their strong increases, and bond prices weathered a midyear downturn to register a moderate increase for the year. Both stock and bond prices were spurred by moderate inflation that accompanied the slowing in economic growth in many industrial countries over the past 2 years. World stock prices gained more than 10 percent on average in 1996, but regional averages varied widely: Prices increased 20 percent in Western Europe, 25 percent Latin America, and 25 percent in Canada, while prices in Asian markets increased little on average and prices in Japan fell 6 percent.

Includes banks and bank holding companies.
 Principally credit, securities, brokerage, and insurance companies.

The second year of strong global equity offerings, corporate mergers and acquisitions, and privatizations contributed to strong net U.S. purchases of foreign stocks, particularly in Western Europe and Latin America. Strong net purchases were both encouraged by, and contributed to, the runup in foreign stock prices. Foreign bond prices, on average, increased 3 percent (chart 13).

Net U.S. purchases of foreign stocks were \$57.8 billion in 1996, up from \$50.7 billion in 1995 but well below the record \$63.4 billion in 1993. Net purchases slowed substantially in the second half of 1996. For 1996, the increase was more than accounted for by Western Europe, Canada, and Latin America. Net purchases from Western Europe were \$30.5 billion, up from \$21.3 billion; as in 1995, the increase was fueled partly by the continued push of U.S. mutual funds into foreign portfolio acquisitions and encouraged by sizable advances in stock prices in most European countries. Net purchases from Canada were more than \$3.0 billion, following small net sales in 1995, as Canadian monetary authorities reduced interest rates several times to stimulate the economy. Net purchases from Latin America were \$3.5 billion, up \$1.4 billion, and were concentrated in Brazil, much of them in new privatization issues placed in the U.S. market. Net purchases from Asian emerging markets were concentrated in Hong Kong, where net purchases were \$4.5 billion, up \$2.3 billion, as Hong Kong stock prices gained 33 percent. Partly offsetting these increases, net purchases from Japan dropped to \$9.7 billion from \$19.8 billion, as the Japanese economy showed few signs of sustained expansion and slowness with the banking system's progress in clearing its bad debts led to sharp declines in stock prices, particularly in the last half of the year. Gross trading activity in stocks increased 31 percent.

Net U.S. purchases of foreign bonds were \$46.8 billion, down from \$48.3 billion. New issues placed in the U.S. market were \$52.5 billion, up from \$39.4 billion and approaching the record level of \$60.9 billion in 1993. Relatively low U.S. rates and the availability of long maturities attracted corporations in emerging markets, many of which placed issues under Securities and Exchange Commission (SEC) Rule 144a, which exempts certain issues from some sec registration requirements. In addition, given the high valuations placed on bonds, U.S. institutional investors became more willing to accept non-investment grade instruments, as spreads between corporate bonds and U.S. Treasury bonds were the smallest in recent years, and spreads be-

tween triple-B and triple-A bonds became very compressed.

Private corporations' issues remained steady at \$31.3 billion, while Government-related issues surged to \$20.1 billion from \$7.8 billion, largely as a result of issues by Latin America and by Asia excluding Japan. Borrowing by governments had been substantially reduced in 1995 following the Mexican peso crisis of late 1994.

Net U.S. purchases of foreign outstanding bonds were \$10.5 billion, down from \$19.5 billion. In contrast to movement in the total, net U.S. purchases of British gilt-edged bonds were slightly higher, although the substantial interest-rate differential favoring British bonds narrowed during the last half of the year. Gross trading activity in corporate and other bonds increased 25 percent.

Direct investment.—Net capital outflows for U.S. direct investment abroad were \$88.3 billion in 1996, down from \$95.5 billion in 1995. A decrease in equity capital outflows more than accounted for the slowdown (table M).

Equity capital outflows decreased to \$24.4 billion from \$36.3 billion. In 1995, U.S. parent companies were involved in numerous multibillion dollar acquisitions that were concentrated in pharmaceuticals, utilities, and telecommunications. Not coincidentally, these industries decreased the most in 1996, when fewer such large-scale transactions occurred. Nonetheless, equity capital outflows remained strong in 1996; outflows were exceeded only by those in 1995 and 1993.

Intercompany debt outflows increased to \$7.6 billion from \$4.7 billion. There were large shifts to outflows to British finance affiliates of U.S. parents in the securities industry and to Bermudan finance affiliates of U.S. parents in the manufacturing and petroleum industries. Shifts to inflows in many other industries partly offset the shift to outflows for finance affiliates.

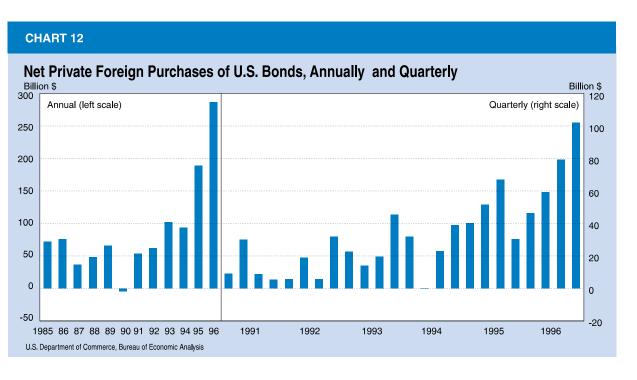

Reinvested earnings were \$56.4 billion, compared with \$54.5 billion.

Foreign assets in the United States

Foreign assets in the United States increased \$525.0 billion in 1996, compared with an increase of \$424.5 billion in 1995. Net foreign purchases of U.S. Treasury securities by private foreigners, net foreign purchases of securities other than U.S. Treasury securities, and foreign direct investment inflows to the United States were sharply higher in 1996 than in 1995.

Foreign official assets.—Foreign official assets in the United States increased a record \$122.8 billion in 1996, compared with the previous record increase of \$109.8 billion in 1995 (table C). Unlike the increase in 1995, which was dominated by developing countries, the increase in 1996 was split about evenly between industrial and developing countries.

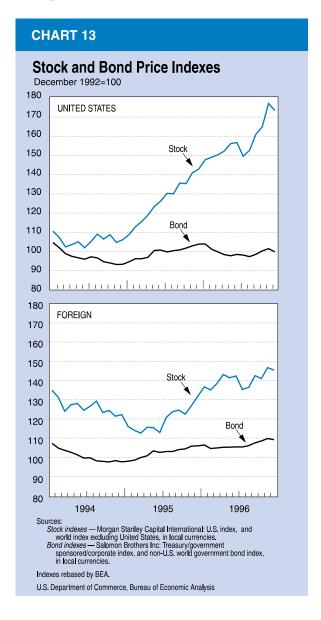

Assets of developing countries increased \$56.6 billion in 1996, compared with an increase of \$86.7 billion in 1995. Assets of non-opec developing countries increased \$43.0 billion, compared with

an increase of \$82.7 billion: The six Latin American and Asian countries that accounted for most of the increase in 1995 also accounted for most of the slowdown in asset accumulation in 1996. Assets of OPEC members increased \$13.6 billion, compared with an increase of \$4.0 billion.

Assets of industrial countries increased \$66.2 billion in 1996, compared with an increase of \$23.1 billion in 1995. Some industrial countries were reported to have purchased dollars in exchange markets to counter the tendency for their own currencies to appreciate when changes in expectations caused sudden large capital inflows.

Liabilities reported by banks.—U.S. liabilities reported by U.S. banks, excluding U.S. Treasury securities, decreased \$1.6 billion in 1996, compared with an increase of \$25.3 billion in 1995 (tables P and Q).

Banks' own liabilities payable in dollars increased \$6.2 billion, compared with an increase of \$4.3 billion. In 1996, U.S. banks repaid large amounts of borrowing from their foreign offices throughout much of the year, but they borrowed heavily from abroad in the fourth quarter to finance the simultaneous surge in domestic and international credit demand and to finance the surge in net foreign purchases of U.S. Treasury securities. Rapid deposit growth from domestic sources provided the funds for some of the repayments, but with the surge in U.S. loan demand for commercial, industrial, and real estate loans in the second half of the year and with an upsurge in demand for dollar credits at U.S. banks' foreign offices, heavy borrowing from abroad was necessary to supplement the continued rapid growth in domestic-source funds.

In the first three-quarters, foreign-owned banks repaid large amounts of borrowing from their parent offices (largely in Japan), and U.S.-owned banks repaid large amounts to banking offices in the Caribbean. In the fourth quarter, borrowing by U.S.-owned banks from offices in the United Kingdom and Caribbean, predominantly during October, and by foreign-owned banks from their branches in the Caribbean, almost entirely in December, resulted in exceptionally large inflows, most of which were to meet the simultaneous surge in domestic and foreign demand for dollar credits. Moderate inflows to U.S. securities dealers occurred only in the first half of the year.

Banks' own liabilities payable in foreign currencies decreased \$6.6 billion, compared with an increase of \$22.6 billion. The sharp cutback in foreign currency borrowing coincided with reduced foreign currency lending and a shift to lending in dollars. Repayments to Western Europe and Japan accelerated in the second half of the year when the demand for dollar credits accelerated.

U.S. Treasury securities.—Net foreign purchases of U.S. Treasury securities by private foreigners were a record \$153.8 billion in 1996, up from the previous record of \$99.3 billion in 1995. The surge was attributable to rising U.S. Treasury bond prices, particularly in the last half of the year, to large interest-rate differentials in favor of U.S. Government bonds over foreign government bonds, and to dollar appreciation.

U.S. Treasury bond prices rose sharply in the last half of the year when it became clear that inflation would not accelerate, in contrast to the first half of the year when bond prices fell when it was feared that strength in the economy might lead to an acceleration in inflation. In addition, interest differentials in favor of U.S. Treasury bonds

widened considerably, mostly in the first half of the year; by yearend, U.S. rates had risen to 100 basis points above German Government bonds and 400 basis points above Japanese Government bonds (chart 3). Furthermore, the U.S. dollar appreciated 7 percent on average against most European currencies and 12 percent against the yen.

Other contributing factors were the large capital outflows from Japan that occurred as financial conditions deteriorated in the fourth quarter and the accelerated reallocation of funds from domestic to international portfolios by Japanese financial institutions, which commenced after the beginning of the Japanese fiscal half-year in October. Finally, net purchases by international bond mutual funds in the Caribbean were especially large in the third and fourth quarters; many of them were likely financed by borrowing through repurchase agreements with U.S. bond dealers.

Net purchases increased from all areas of the world: Net purchases from Western Europe,

D Suppressed to avoid disclosure of data of individual companies.

P Preliminary

Less than \$500,000 (±).

^{1.} OPEC members are Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela. Beginning in January 1993, excludes Ecuador. Individual country information

is not available for all accounts; therefore, some accounts are estimated from regional data.

^{2.} Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts

from foreign parents.

3. Break in series. See Technical Notes in June 1989 and June 1990 SURVEY.

mostly the United Kingdom, were \$82.8 billion, up from \$35.5 billion; net purchases from Japan and other Asian countries, were \$49.9 billion, up from \$19.9 billion; and net purchases from the Caribbean, were \$25.5 billion, down from \$37.5 billion. Gross trading activity in U.S. Treasury bonds increased 23 percent in 1996 (charts 11 and 12).

Other U.S. securities.—Net foreign purchases of U.S. securities other than U.S. Treasury securities surged to a record \$131.7 billion in 1996 from \$95.3 billion in 1995 (table P, charts 11 and 12). A stepup to record net purchases of corporate and U.S. agency bonds was partly offset by a small decrease in net foreign purchases of U.S. stocks.

Net foreign purchases of U.S. corporate and other bonds accelerated to \$119.8 billion from \$81.9 billion. Investors from Western Europe, Japan, the Caribbean, Canada, and Asia increased their net purchases.

Transactions in outstanding corporate bonds surged to a record \$21.4 billion in net purchases from net sales of \$2.3 billion. Low inflation, rising bond prices in the second half of the year, and dollar appreciation contributed to the surge. Gross trading activity in outstanding corporate bonds increased 56 percent in 1996.

New issues sold abroad by U.S. corporations (excluding U.S. federally-sponsored agency issues) remained strong at \$53.4 billion but were down from a record of \$59.3 billion in 1995. Issues placed by banking corporations increased sharply to \$15.5 billion from \$11.0 billion, largely reflecting an increase in asset securitizations. Straight fixed-rate note placements dropped sharply, while floating-rate placements increased. Issues denominated in U.S. dollars and in foreign currencies declined (table R).

Net foreign purchases of newly issued and outstanding U.S. federally-sponsored agency bonds were \$45.0 billion, up from \$25.0 billion, largely

reflecting purchases by investment funds in the Caribbean. Gross trading activity in agency bonds increased 29 percent in 1996.

Net foreign purchases of U.S. stocks were \$11.9 billion, down from \$13.4 billion. Net foreign purchases were not particularly strong in either 1995 or 1996, despite a 32-percent rise in U.S. stock prices in 1995 and a 21-percent rise in 1996—much larger rises than in many foreign stock markets (chart 13).

However, gross trading activity in stocks increased 35 percent in 1996.

Direct investment.—Net capital inflows for foreign direct investment in the United States were a record \$84.0 billion in 1996, compared with \$60.2 billion in 1995 and the previous record of \$67.7 billion in 1989. Both equity and intercompany debt inflows increased strongly (table M).

Equity capital inflows were \$53.2 billion in 1996, well above \$39.5 billion in 1995 and the highest since 1990. The step-up occurred despite some exceptionally large acquisitions in 1995 that were not matched by similar sized acquisitions in 1996. Over one-half of the step-up from 1995 to 1996 was accounted for by German and French parents. German parents made large investments in non-manufacturing industries, particularly telecommunication services, insurance services, and health services. French parents made large investments in telecommunications and manufacturing. Investments by Japan accounted for much of the remainder of the step-up.

Intercompany debt inflows were \$15.1 billion in 1996, compared with \$7.4 billion in 1995. Most of the step-up was from Japan. Inflows from Western Europe were changed little in total, but contained especially large inflows and outflows.

Reinvested earnings were \$15.7 billion, compared with \$13.3 billion.

Tables 1 through 10 follow.

FOOTNOTES TO U.S. INTERNATIONAL TRANSACTIONS TABLES 1-10

General notes for all tables: \mathcal{P} Preliminary. \mathcal{Y} Revised. *Less than \$500,000 (\pm) n.a. Not available. D Suppressed to avoid disclosure of data of individual companies.

Table 1:

1. Credits, +: Exports of goods, services, and income; unilateral transfers to United States; capital inflows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets; increase in foreign official assets in the United States.

Debits, —: Imports of goods, services, and income; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets; decrease in foreign offical assets in the United States

- Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2.
- 3. Includes some goods: Mainly military equipment in line 4; major equipment, other materials, supplies, and petroleum roducts purchased abroad by U.S. military agencies in line 18; and fuels purchased by airline and steamship operators in lines 7 and 21.
 - Includes transfers of goods and services under U.S. military grant programs.
- Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.
- Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
- 7. For all areas, amounts outstanding December 31, 1996, were as follows in millions of dollars: Line 34, 75,089; line 35, 11,048; line 36, 10,312; line 37, 15,435; line 38, 38,294. Data are preliminary.
 - 8. Includes sales of foreign obligations to foreigners.
- 9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
- Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
- Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other
- transactions arranged with or through foreign official agencies; see table 4.

 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments
- 13. Conceptually, the sum of lines 70 and 62 is equal to "net foreign investment" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in the "Reconciliation and Other Special Tables" section in this issue of the Survey of Current Business. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the July issue of the Survey).
- Additional footnotes for historical data in June issues of the Survey:

 14. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 Survey, p. 27.
 - 15. For 1978-83, includes foreign currency-denominated notes sold to private residents abroad.
- 16. Break in series. See Technical Notes in the June 1989, June 1990, June 1992, June 1993, June 1995, and July 1996 issues of the SURVEY.

Table 2:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 Survey), except for 1974–81, when they represent transactions values, f.a.s. foreign port of exportation (see June issues of the Survey for historical data).

From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" month data supplied by the Census Bureau (see Technical Notes in the December 1985 SURVEY).

- Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The seasonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see Technical Notes in the June 1980 Survey, in the June 1988 Survey, and in the June 1991 Survey), Prior to 1993, annual data are as published by the Census Bureau, except that for 1975–80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries.
- 2. Beginning in 1990, the Census Bureau replaced its compiled export statistics with counterpart Canadian import statistics. Similarly, Statistics Canada replaced its compiled export statistics with counterpart U.S. import statistics. This exchange of data has eliminated the need for the inland freight adjustment on U.S. exports, but not on U.S. imports.
- 3. Adjustments in lines A5 and A13, B12, B47, and B82 reflect the Census Bureau's reconciliation of discrepancies between the goods statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line
- 4. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 10, line 4 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 10, line 18 (direct defense expenditures).
- 5. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the SURVEY for historical data).

 6. Deduction of foreign charges for repair of U.S. vessels abroad, which are included in tables 1 and 10, line 21 (other
- b. Deduction or to feight charges for repair of u.S. vessels abroad, which are included in tables 1 and 10, line 21 (lotner transportation); coverage adjustments for special situations in which shipments were omitted from Census data; and the deduction of the value of repairs and alterations to U.S. owned equipment shipped abroad for repair. Also includes addition of understatement of inland freight in f.a.s. values of U.S. imports of goods from Canada in 1974–81; deduction of imports from the Panama Canal Zone before October 1, 1979, and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the Survey for historical data).
 - 7. For 1988–89, correction for the understatement of crude petroleum imports from Canada.

 8. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2
- and 16. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: Industrial countries: Western Europe, Canada, Japan, Australia, New Zealand, and South Africa; Members of OPEC Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (beginning in January 1993, excludes Ecuador); Other countries: Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for some balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates. For all years, "Asia" and "Africa" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."
- 9.Includes the former German Democratic Republic (East Germany) beginning in fourth quarter of 1990. In earlier periods, the German Democratic Republic was included in Eastern Europe.
- 10. Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with New Zealand included as part of "Asia" and South Africa as part of "Africa."
 - 11. Includes nuclear fuel materials and fuels.

Table 3:

- 1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.
- 2. Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and international organizations in the United States. Payments (imports) include mainly wages of foreign residents temporarily employed in the United States and Canadian and Mexican commuters in U.S. border areas.

- 1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93–199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A3 items, part of these military expenditures is applied in lines A40 and A43 to reduce short-term assets previously recorded in lines A38 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A3 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A39 and C9. A third part of line A3, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A34. A fourth part of line A3, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A45.
- Transactions under military sales contracts are those in which the Department of Defense sells and transfers
 military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from
 commercial suppliers are not included as transactions under military sales contracts. The entries for the several categories
- of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.

 3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each
- operating agency.
 4. Line A35 includes foreign currency collected as interest and line A40 includes foreign currency collected as principal,
- as recorded in lines A13 and A14, respectively.

 5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loars extended to foreigners by U.S. Government agencies and (b) the contraentry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.
- 6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.

 7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and
- included in line C2.

Table 5:

- 1. Beginning with 1991, payments and receipts of interest related to interest rate and foreign currency swaps between affiliates and parents are netted and are shown as either net payments or net receipts. Receipts and payments of other types of interest are shown on a gross basis.
- 2. Petroleum includes, and manufacturing and "other" industries exclude, the exploration, development, and production of crude oil and gas, and the transportation, refining, and marketing of petroleum products, exclusive of petrochemicals. "Other" industries includes wholesale trade; banking; finance (except banking), insurance, and real estate; services; and other industries—agriculture, forestry, and fishing; mining; construction; transportation, communication, and public utilities;
- 3. Acquisition of equity holdings in existing and newly established companies, capital contributions, capitalization of intercompany debt, and other equity contributions.

 4. Sales (total and partial), liquidations, returns of capital contributions, and other dispositions of equity holdings.
- Table 6:

- Primarily provincial, regional, and municipal.
 Primarily provincial, regional, and municipal.
 Largely transactions by International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (IDB)
- Estimate for scheduled redemptions and identifiable early retirements. Includes estimates based on Canadian statistics for redemptions of Canadian issues held in the United States. Unidentified and nonscheduled retirements appear in line A30.

Table 7:

- 1. Deposits (line A5) include other financial claims (line A6) for some countries due to the commingling of these categories in foreign source data.
 - 2. Primarily mortgages, loans, and bills and notes drawn on foreigners
- Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
 Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
 Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.

Table 8:

- 1. Includes central governments and their agencies and corporations; state, provincial, and local governments and
- писимые сентиа дочентительства и цент адепсев and corporations; state, provincial, and local governments and their agencies and corporations; and international and regional organizations.
 U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' accounts may be commingled in some categories. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.
- 3. Commercial paper issued in the U.S. market by foreign incorporated entities; excludes commercial paper issued through foreign direct investment affiliates in the United States.

 4. Negotiable and readily transferable instruments other than commercial paper, payable in dollars; consists largely of
- negotiable certificates of deposit.
- Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
- Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
 Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning
- in January 1993, excludes Ecuador.
- 8. Includes Eastern Europe and international and regional organizations.

Table 9:

- 1. Negotiable certificates of deposit issued by banks in the United States are included in banks' custody liabilities and are separately identified in memorandum line 8. Nonnegotiable certificates of deposit are included in time deposits.

 2. Includes borrowing under Federal funds or repurchase arrangements, deferred credits, and liabilities other than deposits.
- 3. Mainly negotiable and readily transferable instruments, excluding U.S. Treasury securities.
 4. Mainly International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB),
- and the Trust Fund of the International Monetary Fund.

 5. U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' liabilities may be commingled in some categories. Foreign-owned banks are U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.
 - Western Europe, Canada, Japan, Australia, New Zealand, and South Africa. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
- Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.
- Includes Eastern Europe and international and regional organizations
- Table 10: For footnotes 1–13, see table 1.

 14. The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the 'European Union' also includes Austria, Finland, and Sweden.
- The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.
- 16. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping and in operating oil and gas drilling equipment internationally. Also includes taxes withheld, currentcost adjustments associated with U.S. and foreign direct investment, and small transactions in business services that are
- not reported by country.

 17. Details not shown separately; see totals in lines 49 and 56.
 18. Details not shown separately are included in line 61.

U.S. DIRECT INVESTMENT ABROAD: 1994 Benchmark Survey, Preliminary Results

This publication presents the preliminary results from the latest benchmark survey, or census, of the worldwide operations of U.S. multinational companies. Benchmark surveys are BEA's most comprehensive surveys, both in terms of companies covered and information gathered.

The publication contains detailed 1994 data on the worldwide operations of U.S. multinational companies In the 103 tables organized by industry of parent or by country and industry of affiliate, you can find data on:

- · Balance sheets and income statements
- Employment and employee compensation
- Property, plant, and equipment
- · Merchandise trade

(City, State, ZIP Code)

(Purchase Order No.)

(Daytime phone including area code)

- Sales of goods and services
- Research and development expenditures

This publication provides some of the most detailed information on U.S. multinational companies collected by the U.S. Government. Order your copy today!

These data are also available from BEA on diskette. For more information write to: International Investment Division, Direct Investment Abroad Branch, BE-69, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230, or call (202) 606-9827, or go to http://www.bea.doc.gov/bea/data-i2.htm on the Internet.

BEA CURRENT AND HISTORICAL DATA

National, International, and Regional Estimates

This section presents an extensive selection of economic statistics prepared by the Bureau of Economic Analysis and a much briefer selection of collateral statistics prepared by other Government agencies and private organizations. Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights.

BEA'S data are available at three web sites: The Federal Statistical Briefing Room (FSBR) on the White House web site (http://www.whitehouse.gov/fsbr) provides summary statistics for GDP and other major aggregates on its output, income, and international statistics pages; BEA'S web site (http://www.bea.doc.gov) provides summary tables and charts on BEA'S national, international, and regional data; and the Commerce Department'S STAT-USA (http://www.stat-usa.gov) provides detailed BEA databases and news releases by subscription. Information about STAT-USA'S Economic Bulletin Board (EBB) and Internet services may be obtained at the web site or by calling (202) 482–1986 (voice).

The tables listed below present annual, quarterly, and monthly estimates, indicated as follows: [A] Annual estimates only; [Q] quarterly estimates only; [QA] quarterly and annual estimates; [MA] monthly and annual estimates.

National Data

A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on March 28, 1997 and include the "final" estimates for the fourth quarter of 1996 and year 1996.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most tables, the annual estimates are also shown. (Some of the lines in tables 1.10 and 1.16 are not yet available and are shown as leaders; they will be shown in the May Survey.) These tables are available electronically on the day of the gross domestic product (GDP) news release by subscription from STAT-USA'S Economic Bulletin Board and Internet services; for information, call (202) 482-1986. The tables are also available on printouts or diskettes; for subscription information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230 or call (202) 606-9700.

For a guide to which issues of the Survey contain the complete set of NIPA tables for the period 1991–96, see the headnote and list of tables that appeared on pages 15–17 of the August 1996 issue.

Note.—In the May Survey, Bea will publish the following NIPA and wealth estimates that reflect the completion of the most recent comprehensive revision of the NIPA's: Revised NIPA summary estimates for 1929-96, revised estimates of reproducible tangible wealth for 1929-95, and newly available and revised NIPA estimates of selected series for 1991-96. For more information, see the box on page 5.

1. National Product and Income.

NoTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines. Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the prepared theorem is read present depresed present product or a power in table 8.2.2.

the percent change in real gross domestic product are shown in table 8.2.

Residual	8	-1.9	7	-1.3	-1.6	-1.9	-2.2	-2.5

Gross domestic business product equals gross domestic product less gross product of households and institutions and of general government. Nonfarm product equals gross domestic business product less gross farm product.
 Equals compensation of general government employees plus general government consumption of fixed capital.

^{2.} Equals compensation of general government employees plus general government consumption or inxed capital as shown in table 3.8B.
NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Addendum: Terms of trade ²	101.6	101.6	101.7	101.9	102.0	101.8	101.9	101.0

Gross domestic income deflated by the implicit price deflator for gross domestic product.
 Gross national income deflated by the implicit price deflator for gross national product.
 NOTE.—Except as noted in footnotes 1 and 2, chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-delta continuation are substituted and delta. dollar estimates are usually not additive.

Exports of goods and services and receipts of factor income deflated by the implicit price deflator for imports of goods and services and payments of factor income.
 Ratio of the implicit price deflator for exports of goods and services and receipts of factor income to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Percent changes from preceding period for selected items in this table are shown in table 8.1.

corporate business ¹ Consumption of fixed capital ²											
Net domestic product ³											

Chained-dollar gross domestic product of nonfinancial corporate business equals the current-dollar product deflated by the implicit price deflator for goods and structures in gross domestic product.
 Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100.
 3. Chained-dollar net domestic product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

Residual	-3.5	-5.8	-3.4	-3.8	-4.8	-6.0	-6.2	-6.4

Note.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines is the difference between the first line and the sum of the most detailed lines, excluding the

Coss government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

 Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.

 Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addenda.

 Compensation of government consumption of good capital or depreciation is included in government consumption as wearditures as a serticular consumption of fixed and the consumption of government consumption construction and government consumption of government consumption of government consumption of government consumption of government consumption construction and government consumption construction con

^{4.} Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

lines in the addenda.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the

^{2.} Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries.
3. Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addendum.
4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

line in the addendum.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following the detail for exports is the difference between the aggregate "corporated and services" and the sum of the detailed lines for exports of goods and export of services. The residual line following the detail for imports is the difference between the aggregate "imports of goods and services" and the detailed lines for imports of goods and imports of services. See footnotes to table 4.3.

Includes parts of foods, feeds, and beverages; of nondurable industrial supplies and materials; and of nondur ble nonautomotive consumer goods.

^{1.} Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of GDP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates; whereas, CBI is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government and includes a small amount of final sales by farm.

structures	4.10	4.10	4.05	4.01	4.04	3.99

by tarm.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories.

Exports of goods and services: Current dollars	126.3	133.7	128.1	130.9	131.3	132.9	132.0	138.7	Chain-type price indexImplicit price deflator	106.7	109.8	107.1	107.7 107.7	109.2	109.2	110.1	110.9	

NOTE.— Chain-type quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current- to chained-dollar output multiplied by 100.

Percent changes from preceding period for items in this table are shown in table 8.1.

NOTE.—Except for disposable personal income, the quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Prior to the third quarter of 1995, these indexes use the geometric mean of weights that reflect the composition of output for the preceding and current years. Beginning with the third quarter of 1995, these indexes use weights that reflect the composition

of output in 1995. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current- to chained-dollar output multiplied by 100. (Contributions to the percent change in real gross domestic product are shown in table 8.2.)

Change in business inventories	1.9	7	.9	.4	-4.5	4.3	1.1	-3.6
Residual	0	1	1	1	0	0	1	1

1. Includes new trucks only.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{2.} Otrisis of personal consumption experiments product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the

B. Other NIPA Tables.

Monthly Estimates:

Tables B.1 and B.2 include the most recent estimates of personal income and its components; these estimates were released on March 31, 1997 and include "preliminary" estimates for February 1997 and "revised" estimates for October–December 1996 and January 1997.

The current-dollar statistical discrepancy equals gross domestic product (GDP) measured as the sum of expenditures less gross domestic income—that is, GDP measured as the costs incurred and profits earned in domestic production. The chained (1992) dollar statistical discrepancy equals the current-dollar discrepancy deflated by the implicit price deflator for gross domestic product.
 Equals GDP in chained (1992) dollars less the statistical discrepancy and the sum of GPO of the detailed industries.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification. The table is derived from tables 10 and 14 in "Improved Estimates of Gross Product by Industry, 1959–94" in the August 1996 SURVEY OF CURRENT BUSINESS.

- 1. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premise
- Includes luggage.
 Consists of watch, clock, and jewelry repairs, costume and dress suit rental, and miscellaneous personal serv-
- ices.

 4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.

 5. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.

 6. Consists of transient hotels, motels, clubs, schools, and other group housing.
- Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air condi-tioners, sewing machines, vacuum cleaners, and other appliances.
- 8. Includes such house furnishings as floor coverings, comforters, quilts, blankets, pillows, picture frames, mirrors, art products, portable lamps, and clocks. Also includes writing equipment and hand, power, and garden tools.

 9. Consists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes lamps haddes prome and burshes.
- includes lamp shades, brooms, and brushes, includes lamp snades, prooms, and brushes.

 10. Consists of maintenance services for appliances and house furnishings, moving and warehouse expenses, postage and express charges, premiums for fire and theft insurance on personal property less benefits and dividends, and miscellaneous household operation services.

 11. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical serv-
- ices.
 12. Consists of osteopathic physicians, chiropractors, private duty nurses, chiropodists, podiatrists, and others pro-
- Viding health and allied services, not elsewhere classified.

 13. Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.

 14. Consists of (1) premiums, less benefits and dividends, for health, hospitalization, and accidental death and dismemberment insurance provided by commercial insurance carriers, and (2) administrative expenses (including consumption of fixed capital) of Blue Cross and Blue Shield plans and of other independent prepaid and self-insured
- neatin plans.

 15. Consists of premiums, less benefits and dividends, for income loss insurance.

 16. Consists of premiums, less benefits and dividends, for privately administered workers' compensation.

 17. Consists of (1) operating expenses of life insurance carriers and private noninsured pension plans, and (2) premiums, less benefits and dividends, of fraternal benefit societies. Excludes expenses allocated by commercial carriers to accident and health insurance.
- 18. Consists of current expenditures (including consumption of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other personal business services.
- 19. Consists of premiums, less benefits and dividends, for motor vehicle insurance.
 20. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, and airport bus fares. 21. Consists of admissions to professional and amateur athletic events and to racetracks.

- 22. Consists of dues and fees excluding insurance premiums
- 23. Consists of billiard parlors; bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; sightseeing buses and guides; private flying operations; casino gambling; and other commercial participant amusements
- 24. Consists of net receipts of lotteries and expenditures for purchases of pets and pet care services, cable TV, film processing, photographic studios, sporting and recreation camps, video cassette rentals, and recreational services, not elsewhere classified.
- 25. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For government institutions, equals student payments of tuition.
- 26. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts— such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures. For gov-ernment institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare activities.
- 27. Consists of (1) fees paid to commercial, business, trade, and correspondence schools and for educational services, not elsewhere classified, and (2) current expenditures (including consumption of fixed capital) by research organizations and foundations for education and research.
- 28. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious, so-cial welfare, foreign relief, and political organizations, museums, libraries, and foundations. The expenditures are net of receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer ex-penditures, and excludes relief payments within the United States and expenditures by foundations for education and research. For proprietary and government institutions, equals receipts from users.

and research. For proprietary and government institutions, equals receipts from users.

NOTES.—Consumer durable goods are designated durable goods (d.), nondurable goods (n.d.), and services (s.).

Estimates of foreign travel by U.S. residents (line 108) expenditures were \$0.3 billion in 1981. Beginning with 1984, estimates of foreign travel by U.S. residents include substantially improved estimates of U.S. residents' foreign travel expenditures expenditures in the United States by nonresidents (line 110) include, beginning with 1981, nonresidents' student and medical care expenditures in the United States. Student expenditures were \$2.2 billion, and medical expenditures were \$0.4 billion in 1981. Beginning with 1984, estimates of expenditures in the United States by nonresidents include substantially improved estimates of nonresidents' travel expenditures. Expenditures in the United States by nonresidents are subtracted from total personal consumption expenditures (line 110) because they are included in detailed type of expenditure estimates elsewhere in personal consumption expenditures. consumption expenditures.

Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Includes new computers and peripheral equipment only.

used for commercial purposes.

3. Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not

elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.

4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields.

5. Consists primarily of dormitories, fraternity and sorority houses, and nurses' homes.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Note—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

n.e.c. Not elsewhere classified.

Consists of museums, botanical, zoological gardens; engineering and management services; and services, not elsewhere classified.
 Lincludes Coast Guard.

NOTES.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC). Compensation equals wage and salary accruals plus supplements to wages and salaries. "Supplements" are listed in table 8.15 of the January/February 1996 SURVEY OF CURRENT BUSINESS.

Equals the number of full-time equivalent employees plus the number of self-employed persons. Unpaid family workers are not included.
 Consists of museums, botanical, zoological gardens; engineering and management services; and services, not elsewhere classified.

^{3.} Includes Coast Guard.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

^{1.} Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

Consists of museums, botanical, zoological gardens; engineering and management services; and services, not elsewhere classified.
 Includes Coast Guard.

Table B.10.—Farm Sector Output, Gross Product, and National Income

 CCAdj Capital consumption adjustment IVA Inventory valuation adjustment

C. Historical Tables_

Table C.1 is derived from the "Summary National Income and Product Series" tables that were published in the January/February 1996 Survey of Current Business; tables C.2–C.25 are derived from NIPA tables published in that issue. All the tables in this section include revised data for 1993–96 from the annual revision of the NIPA's published in the August 1996 Survey. (Changes in prices are calculated from indexes expressed to three decimal places.)

International Data

F. Transactions Tables

Table F.1 includes the most recent estimates of U.S. international trade in goods and services; the estimates were released on March 20, 1997 and include "preliminary" estimates for January 1997 and "revised" estimates for January–December 1996. The sources for the other tables in this section are as noted.

P Preliminary.

r Revised. * Less than \$500,000 (±).

^{*} Less than \$500,000 (±).

n.a. Not available.

1. Credits, +: Exports of goods, services, and income; unilateral transfers to United States; capital inflows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets; increase in foreign official assets in the United States.

Debits, -: Imports of goods, services, and income; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets; decrease in foreign official assets in the United States.

2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2. see table 2.

^{3.} Includes some goods: Mainly military equipment in line 4; major equipment, other materials, supplies, and petro-leum products purchased abroad by U.S. military agencies in line 18; and fuels purchased by airline and steamship operators in lines 7 and 21.

operators in lines 7 and 21.

4. Includes transfers of goods and services under U.S. military grant programs.

5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.

7. For all areas, amounts outstanding December 31, 1996, were as follows in millions of dollars: Line 34, 75,089; line 35, 11,048; line 36, 10,312; line 37, 15,435; line 38, 38,294. Data are preliminary.

Includes sales of foreign obligations to foreigners.
 Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

^{10.} Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities

^{10.} Collistis of U.S. Treasury and Export-import Balik obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 4.

12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.

^{13.} Conceptually, the sum of lines 70 and 62 is equal to "net foreign investment" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in the "Reconciliation and Other Special Tables" section in this issue of the Survey of Current Business. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the July issue of the Survey).

^{14.} The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the 'European Union' also includes Austria, Finland, and

Sweden.

15. The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.

16. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping and in operating oil and gas drilling equipment internationally. Also includes taxes withheld,

current-cost adjustments associated with U.S. and foreign direct investment, and small transactions in business services that are not reported by country.

^{17.} Details not shown separately; see totals in lines 49 and 56.18. Details not shown separately are included in line 61.

NOTE.—The data in tables F.2 and F.3 are from tables 1 and 10 in "U.S. International Transactions, Fourth Quarter and Year 1996" in this issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates from the balance of payments accounts.

^{1.} Represents gains or losses on foreign-currency-denominated assets due to their revaluation at current exchange rates.

amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

^{2.} Includes changes in coverage, statistical discrepancies, and other adjustments to the value

of assets.

3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions capital flows.

5. Also includes paid-in capital subscriptions to international financial institutions and outstanding

^{6.} Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other trans-

actions arranged with or through foreign official agencies.

NOTE.—The data in this table are from table 1 in "International Investment Position of the United States in 1995" in the July 1996 SURVEY OF CURRENT BUSINESS.

^{1.} Index of weighted average exchange value of U.S. dollar against currencies of other G-10 countries. March 1973–100. Weights are 1972–76 global trade of each of the 10 countries. Series revised as of August 1978. For description and back data, see "Index of the weighted-average exchange value of the U.S. dollar: Revision" on page 700 of the August 1978 Federal Reserve Bulletin.

NOTE.—All exchange rates are from the Board of Governors of the Federal Reserve System. U.S. interest rates, unemployment rate, and GDP growth rate are from the Federal Reserve, the Bureau of Labor Statistics, and BEA, respectively. All other data (including U.S. consumer prices and U.S. share prices, both of which have been rebased to 1990 to facilitate comparison) are © OECD, March 1997, OECD Main Economic Indicators and are reproduced with permission of the OECD.

THE U.S. IN THE INTERNATIONAL ECONOMY

Regional Data

J. State and Regional Tables

The annual estimates of State personal income in this section are from the 1996 comprehensive revision of the annual estimates for 1969–95. The quarterly estimates of State personal income are from the 1996 comprehensive revision of the quarterly estimates for 1990 through the first quarter of 1996; updated quarterly estimates are shown for the second and third quarters of 1996. In fall 1997, the revised quarterly State estimates for 1969–89 will be released, and the quarterly estimates for 1990-96 will be revised again and released.

Annual estimates of gross state product are shown for 1992; in summer 1997, a comprehensive revision of the gross state product estimates for 1977–92 and new estimates for 1993–94 will be released.

Nonfarm personal income is total personal income less farm earnings. Farm earnings consists of proprietors' net income; the cash wages, pay-in-kind, and other labor income of farm employees; and the salaries of officers of corporate farms.

Percent change was calculated from unrounded data.NOTE.—The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the national income and product accounts (NIPA) estimate of personal income because, by definition,

it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. It can also differ from the NIPA estimate because of different data sources and revision schedules

Source: Table 1 in "Comprehensive Revision of State Personal Income, 1969—95" in the October 1996 SURVEY OF CURRENT BUSINESS and table 1 in "Personal Income by State and Region, Third Quarter 1996" in the February

stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. It can also differ from the NIPA estimate because of different data sources and revision schedules. Source: Tables 2 and 4 in "Comprehensive Revision of State Personal Income, 1969–95" in the October 1996 SURVEY OF CURRENT BUSINESS.

Per capita personal income and per capita disposable personal income were computed using midyear population estimates of the Bureau of the Census.
 NOTE.—The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the national income and product accounts (NIPA) estimate of personal income because, by definition, it omits the earnings of Federal civilian and military personnel.

Table J.4.—Gross State Product for States and Regions by Industry, 1992 [Millions of dollars]

Note.—Totals shown for the United States differ from NIPA estimates because State data exclude wages and salaries of Federal civilian and military personnel stationed abroad and because of differences in revision schedules. Source: Tables 1 and 2 in "Gross State Product, 1991–92" in the May 1995 SURVEY OF CURRENT BUSINESS.

K. Local Area Table_

Annual estimates of local area personal income are shown for 1992–94; in August 1997, a comprehensive revision of the local area estimates for 1969–94 and new estimates for 1995 will be released.

Table K.1.—Total Personal Income and Per Capita Personal Income by Metropolitan Area, 1992–94

The personal income level shown for the United States is derived as the sum of the county estimates; it differs from the national income and product accounts (NIPA) estimate of personal income because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. It can also differ from the NIPA estimate because of different data sources and revision schedules.

2. Percent change was calculated from unrounded data.

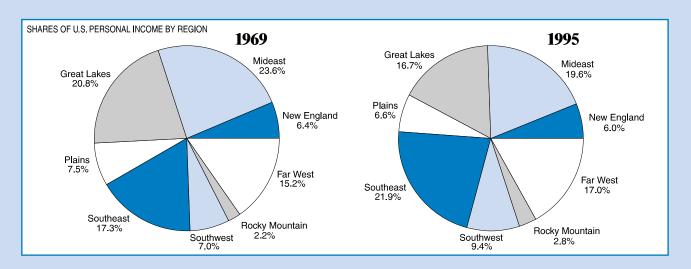

^{3.} Per capita personal income was computed using Bureau of the Census midyear population estimates. Estimates for 1992-94 reflect county population estimates available as of October 1995.

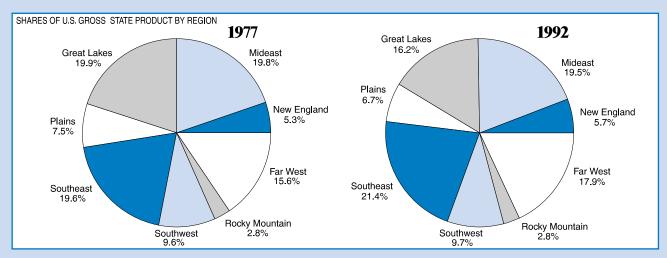

4. Includes Metropolitan Statistical Areas, Primary Metropolitan Statistical Areas (PMSA's designated by *), and New England County Metropolitan Areas (NECMA's). The New Haven-Bridgeport-Stamford-Danbury-Waterbury, CT NECMA is presented as a PMSA (part of the New York CMSA).

Additional Information About BEA's NIPA Estimates

Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most gdp components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

Except for the most recent period, the annual and quarterly changes in real GDP and prices are "chain-type" measures that are both based on the "Fisher Ideal" formula that incorporates weights from two adjacent years. For example, the 1992–93 percent change in real GDP uses prices for 1992 and 1993 as weights, and the 1992–93 percent change in price uses quantities for 1992 and 1993 as weights. Because the quantity and price index numbers calculated in this way are symmetric, the product of the annual change in real GDP and the annual change in prices equals the annual change in current-dollar GDP.

In the most recent period, a variant of the formula is used because only 1 year's information is available for computing the index number weights. Accordingly, BEA uses a single year's weights and, as a consequence, the product of the percentage changes in the price and quantity indexes does not equal the current-dollar change during this period. For this reason, another measure, known as the "implicit price deflator," is presented in the NIPA tables. The implicit price deflator is calculated as the ratio of current-dollar value to the corresponding chained-dollar value multiplied by 100.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1992) dollar estimates." These estimates are computed by multiplying the 1992 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled \$100 in 1992 and if real output for this component increased by 10 percent in 1993, then the "chained (1992) dollar" value of this component in

1993 would be \$110 ($$100 \times 1.10$). Note that percentage changes in the chained (1992) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1992) dollar estimates for detailed GDP components *do not add* to the chained-dollar value of GDP or to any intermediate aggregates. A "*residual*" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. In cases where the residual is large, the table of contributions of the major components to the change in real GDP provides a better basis for determining the composition of GDP growth than the chained-dollar estimates.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths—for example, quarters and years—may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left\lceil \left(\frac{X_t}{X_0} \right)^{m/n} - 1 \right\rceil \times 100,$$

where r is the percent change at an annual rate; X_t is the level of activity in the later period; X_o is the level of activity in the earlier period; m is the yearly periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and n is the number of periods between the earlier and later periods (that is, t - o).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

Reconciliation Tables

Table 1.—Reconciliation of Changes in BEA-Derived Compensation Per Hour with BLS Average Hourly Earnings [Percent change from preceding period]

^{1.} Consists of statistical revisions in the NIPA's that have not yet been incorporated in the BPA's (1996:IV) and statistical revisions in the BPA's that have not yet been incorporated in the NIPA's (1996:I-1996:IV).

Preliminary.
 Includes BEA use of non-BLS data and differences in detailed weighting. Annual estimates also include differences in BEA and BLS benchmark procedures; quarterly estimates also include differences in seasonal adjustment procedures.

^{2.} These estimates differ from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing.

NOTE.—The table incorporates BLS revisions to reflect the 1995 Hours at Work Survey. BLS Bureau of Labor Statistics

Appendix B Suggested Reading

Mid-Decade Strategic Plan

BEA has published the following articles in the Survey of Current Business on the development and implementation of its strategic plan for improving the accuracy, reliability, and relevance of the national, regional, and international accounts.

"Mid-Decade Strategic Review of BEA's Economic Accounts: Maintaining and Improving Their Performance" (February 1995)*

"Mid-Decade Strategic Review of BEA's Economic Accounts: An Update" (April 1995)*

"BEA'S Mid-Decade Strategic Plan: A Progress Report" (June 1996)*

Mid-Decade Strategic Review of BEA's Economic Accounts: Background Papers (1995) presents seven background papers that evaluate the state of the U.S. economic accounts and that identify the problems and the prospects for improving the accounts.

Methodology

BEA has published a wealth of information about the methodology used to prepare its national, regional, and international estimates.

National

National income and product accounts (NIPA's)

NIPA Methodology Papers: This series documents the conceptual framework of the NIPA's and the methodology used to prepare the estimates.

An Introduction to National Economic Accounting (NIPA Methodology Paper No. 1, 1985) [Also appeared in the March 1985 issue of the SURVEY]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (NIPA Methodology Paper No. 2, 1985)

Foreign Transactions (NIPA Methodology Paper No. 3, 1987)

GNP: An Overview of Source Data and Estimating Methods (NIPA Methodology Paper No. 4, 1987) [Also appeared in the July 1987 issue of the SURVEY] Government Transactions (NIPA Methodology Paper No. 5, 1988)

Personal Consumption Expenditures (NIPA Methodology Paper No. 6, 1990)

The methodologies described in these papers are subject to periodic improvements that are typically introduced as part of the annual and comprehensive revisions of the NIPA's; these improvements are described in the SURVEY articles that cover these revisions.

"Annual Revision of the U.S. National Income and Product Accounts": This series of Survey articles, the latest of which was published in the August 1996 issue,* describes the annual NIPA revisions and the improvements in methodology.

The most recent comprehensive revision of the NIPA's is described in the following series of SURVEY articles.

"Preview of the Comprehensive Revision of the National Income and Product Accounts: BEA's New Featured Measures of Output and Prices" (July 1995)*

"Preview of the Comprehensive Revision of the National Income and Product Accounts: Recognition of Government Investment and Incorporation of a New Methodology for Calculating Depreciation" (September 1995)*

"Preview of the Comprehensive Revision of the National Income and Product Accounts: New and Redesigned Tables" (October 1995)*

"Improved Estimates of the National Income and Product Accounts for 1959–95: Results of the Comprehensive Revision" (January/February 1996)*

"Updated Summary Methodologies" (August 1996 SURVEY)* identifies the principal source data and estimating methods that are used to prepare the estimates of gross domestic product (GDP).

Information on the sources and methods used to prepare the national estimates of personal income, which provide the basis for the State estimates of personal in-

Availability

For the availability of some of these publications, see the inside back cover of this issue. See also the *User's Guide to BEA Information*: To request a copy, write to the Public Information Office, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington DC 20230, call 202-606-9900, or visit BEA's Internet site at http://www.bea.doc.gov.

^{*} These items can be found on BEA's Internet site at http://www.bea.doc.gov.

come, can be found in *State Personal Income*, 1929–93 (1995).*

"Gross Domestic Product as a Measure of U.S. Production" (August 1991 SURVEY) briefly explains the difference between GDP and gross national product.

The conceptual basis for the chain-type measures of real output and prices used in the NIPA's are described in the following SURVEY articles.

"Alternative Measures of Change in Real Output and Prices" (April 1992)*

"Economic Theory and BEA's Alternative Quantity and Price Indexes" (April 1992)*

"Alternative Measures of Change in Real Output and Prices, Quarterly Estimates for 1959–92" (March 1993)*

"Preview of the Comprehensive Revision of the National Income and Product Accounts: BEA's New Featured Measures of Output and Prices" (July 1995)*

"Reliability and Accuracy of the Quarterly Estimates of GDP" (October 1993 SURVEY)* evaluates GDP estimates by examining the record of revisions in the quarterly estimates.

"A Look at How BEA Presents the NIPA'S" (May 1996 SURVEY)* explains how to locate the NIPA estimates and some of the conventions used in their presentation.

Gross product by industry

"Improved Estimates of Gross Product by Industry, 1959–94" (August 1996 SURVEY)* describes the most recent comprehensive revision of the estimates of gross product by industry.

Input-output accounts

Benchmark Input-Output Accounts of the United States, 1987 (1994)* describes the concepts and methods used in the generation of the benchmark input-output tables for 1987.

International

Balance of payments accounts (BPA's)

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990)

describes the methodologies used in preparing the estimates in the BPA's and of the international investment position of the United States. These methodologies are subject to periodic improvements that are typically introduced as part of the annual revisions of the BPA's.

"U.S. International Transactions, Revised Estimates": This series of Survey articles, the latest of which was published in the July 1996 issue,* describes the annual BPA revisions and the improvements in methodology.

Direct investment

The coverage, concepts, definitions, and classifications used in the benchmark surveys of U.S. direct investment abroad and of foreign direct investment in the United States are presented in the publications of the final results of the most recent benchmark surveys.

U.S. Direct Investment Abroad: 1989 Benchmark Survey, Final Results (1992)*

Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final Results (1995)*

The types of data on direct investment that are collected and published by BEA and the clarifications of the differences between the data sets are presented in the following SURVEY articles.

"A Guide to BEA Statistics on U.S. Multinational Companies" (March 1995)*

"A Guide to BEA Statistics on Foreign Direct Investment in the United States" (February 1990)*

Regional

Personal income

State Personal Income, 1929–93 (1995)* includes a description of the methodology used to prepare the estimates of State personal income. [Also available on the State Personal Income 1969–95 CD-ROM]

Local Area Personal Income, 1969—92 (1994)* includes a description of the methodology used to prepare the estimates of local area personal income. [Also available on the Regional Economic Information System CD-ROM]

Gross state product

"Gross State Product, 1977–90" (December 1993 Survey)* summarizes the sources and methods for BEA's estimates of gross state product.

BEA INFORMATION

The economic information prepared by the Bureau of Economic Analysis (BEA) is available in news releases, in publications, on computer diskettes, on CD—ROM's, and on the Internet. For a description of these products in the free *User's Guide to BEA Information*, write to the Public Information Office, BE—53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230, or call (202) 606—9900. The *User's Guide* and other information are also available on BEA's home page at http://www.bea.doc.gov.

In addition, the following publications are available from the Superintendent of Documents of the Government Printing Office (GPO). To order, write to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954, call (202) 512–1800 or fax (202) 512–2250. Pay by check to the Superintendent of Documents or charge to a GPO deposit account, to VISA, or to MasterCard.

Benchmark Input-Output Accounts of the United States, 1987. (1994) Presents summary and detailed make and use tables for industries and commodities; tables showing commodity- and industry-output-requirements per dollar of commodity demanded; and tables showing the input-output (1-0) commodity composition of personal consumption expenditures and producers' durable equipment expenditures in the national income and product accounts. Presents concepts and methods used in the 1987 benchmark accounts; concordance beween 1-0 and 1987 Standard Industrial Classification codes; description of the components of the measures of output, intermediate inputs, and value added; and mathematical derivation of total requirements tables. (468 pages) \$29.00, stock no. 003–010–00251–4.

Regional Multipliers: A User Handbook for the Regional Input-Output Modeling System (RIMS II), Third Edition. (1997) This handbook describes the five types of RIMS II multipliers that are available for nearly 500 industries and for any county or for any group of counties. It details the information that the users need in order to effectively use the RIMS II multipliers to analyze the economic and industrial impact of public and private projects and programs on State and local areas. The handbook also includes case studies that illustrate the uses of the RIMS II multipliers and a description of the methodology that the Bureau of Economic Analysis uses to estimate the multipliers. (63 pages) \$6.00, stock no. 003–010–00264–6.

State Personal Income, 1929–93. (1995) Presents detailed annual estimates for States and regions of personal income for 1929–93, including estimates of per capita personal income, personal income by major source, and earnings by industry. Also presents annual estimates of disposable personal income and per capita disposable personal income for 1948–93 and quarterly estimates of personal income for 1969–93. Provides information about the sources and methods used to prepare the estimates for 1987–93 and samples of all the detailed tables of personal income and employment that are available for regions, States, counties, and metropolitan areas. (444 pages) \$27.00, stock no. 003–010–00257–3.

Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final Results. (1995) Presents detailed data on the financial structure and operations of U.S. affiliates of foreign direct investors, on the foreign direct investment position in the United States, and on the balance-of-payments transactions between U.S. affiliates and their foreign parent companies in 1992. Includes data for items, such as employment covered by collective bargaining agreements and merchandise trade by product and country of destination and origin, that are only collected in

benchmark surveys. Benchmark surveys are conducted every 5 years and are BEA's most comprehensive surveys in terms of both the number of companies covered and the amount of information gathered. The data are classified by industry of affiliate and by country of ultimate beneficial owner, and selected data are classified by State. Provides information about the coverage, the concepts and definitions, and the classifications used in the survey. (312 pages) \$20.00, stock no. 003–010–00259–0.

Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies. (1996) Two publications: One presents the revised estimates for 1993, and the other, the preliminary estimates for 1994 from BEA's annual surveys of the financial structure and operations of nonbank U.S. affiliates of foreign direct investors. The estimates are presented by industry of the U.S. affiliate and by country of the ultimate beneficial owner (UBO) and for selected estimates, by industry of UBO and by State. Preliminary 1994 Estimates (108 pages) \$8.50, stock no. 003–010–00261–1; Revised 1993 Estimates (108 pages) \$8.50, stock no. 003–010–00260–3.

Foreign Direct Investment in the United States: Establishment Data for Manufacturing, 1991. (1994) A joint effort by BEA and the Bureau of the Census. Presents the most recently available data for foreign-owned U.S. manufacturing establishments (plants) by detailed industry (up to 459 industries), by State, and by country of investor. Includes data on the number of plants, value added, shipments, employment, total employee compensation, employee benefits, the hourly wage rates of production workers, the cost of materials and energy used, inventories by stage of fabrication, and expenditures for new plant and equipment. (220 pages) \$14.00, stock no. 003–010–00250–6.

U.S. Direct Investment Abroad: 1994 Benchmark Survey, Preliminary Results. (1997) Presents preliminary results from the latest benchmark survey of the worldwide operations of U.S. multinational companies. Contains detailed 1994 data on the operations of U.S. parent companies and their foreign affiliates in 103 tables organized by country and by industry. (140 pages) \$14.00, stock no. 003–010–00263–8.

U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates, Revised 1993 Estimates. (1996) Provides revised results for 1993 from BEA's annual survey of the worldwide operations of U.S. multinational companies. Contains information on the financial structure and operations of U.S. parent companies and their foreign affiliates. Data are classified by country and industry of affiliate and by industry of U.S. parent. (120 pages) \$11.00, stock no. 003–010–00262–0.
